Freedom Is an Endless Meeting Francesca Polletta, 2020-03-04 This excellent study of activist politics in the United States over the past century challenges the conventional wisdom about participatory democracy Times Literary Supplement *Freedom Is an Endless Meeting* offers vivid portraits of American experiments in participatory democracy throughout the twentieth century Drawing on meticulous research and more than one hundred interviews with activists Francesca Polletta

upends the notion that participatory democracy is worthy in purpose but unworkable in practice Instead she shows that social movements have often used bottom up decision making as a powerful tool for political change Polletta traces the history of democracy from early labor struggles and pre World War II pacifism through the civil rights new left and women s liberation movements of the sixties and seventies and into today s faith based organizing and anti corporate globalization campaigns In the process she uncovers neglected sources of democratic inspiration such as Depression era labor educators and Mississippi voting registration workers as well as practical strategies of social protest Polletta also highlights the obstacles that arise when activists model their democracies after nonpolitical relationships such as friendship tutelage and religious fellowship She concludes with a call to forge new kinds of democratic relationships that balance trust with accountability respect with openness to disagreement and caring with inclusiveness For anyone concerned about the prospects for democracy in America *Freedom Is an Endless Meeting* will offer abundant historical theoretical and practical insights

Committee on Labor and Human Resources, 1979 *How We Teach Science* John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to

the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

An Age of Accountability John L. Rury,2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree
