The Maximo extensions for Building Information Modeling (BIM) is released as trial software and distributed on the IBM Service Management (ISM) Library. An existing Maximo Asset Management 7.5 or 7.6 license and installation is required. Trial software is not supported by the IBM Maximo support program; however, support is available directly from the IBM Maximo development team for as long as the software is available for download on the ISM Library. Check the ISM Library for the most recent version as well as continued availability. Only an English version is distributed during the trial. Your feedback is important because the software is being evaluated for possible integration with other Maximo products. **IBM Tivoli Change and Configuration Management Database (CCMDB) V7.2.1 Implementation Guide** Yatresh Agarwal, Bill Cary, Sandy Cash, Leandro Cassa, Brian Demartini, Chris Duplantis, Alisson Negrisola de Godoi, Douglas Barranqueiros Gomes, Vasfi Gucer, Murat Kipel, Antonio Orlando Neto, Caio Elias Saad, Ghufan Shah, Peterson Domingos Tamarindo, Krishnan Venkitasubramanian, IBM Redbooks, 2010-12-13. The IBM Tivoli Change and Configuration Management Database (CCMDB) is one of the key components of the IBM Service Management (ISM) strategy. It is the foundation for automating and supporting change and configuration management processes as described by the Information Technology Infrastructure Library (ITIL). These process solutions provide best practice implementations of processes based not only on ITIL but on the IBM Process Reference Model for ITTM and other standards as well. This IBM Redbooks publication provides information that can be used by clients, partners or IBM field personnel who are looking to engage in an effort to implement change and configuration management processes in an enterprise environment utilizing the IBM Tivoli Change and Configuration Management Database (CCMDB) V7.2.1 product. It covers the new features available with CCMDB V7.2 and CCMDB V7.2.1 as well as details about the underlying components of the product and utilizing the product to support robust IT processes such as change and configuration management. It also focuses on the details of the data model, process engine and the Change and Configuration Management Process Management Programs (PMPs). **Deploying a Cloud on IBM System z** Mike Buzzetti, James Kuchler, Charlie Lawrence, IBM Redbooks, 2011-05-03. Cloud computing using shared resources in public spaces instead of in-house IT organizations is the latest thing in IT. Lines of business even bypass their own IT shops to take advantage of external providers of cloud offerings. However, many of the users that employ public cloud services have not considered issues involving security, compliance and availability. Cloud represents a new business model that requires a process discipline as well as the use of a corresponding set of technologies. The new model requires an understanding of the hardware configuration, software images, a virtualized storage infrastructure and network management. For many organizations that have mainframe resources, the IT professionals

already manage these different disciplines and aspects of resources as part of their overall management of the platform The mainframe s proven capability to efficiently and securely provide virtualization combined with the existing skills in the IT organization suggest that in house mainframe resources provide an ideal environment in which to pilot cloud computing This IBM Redpaper™ document describes the steps we took to create an environment that can efficiently deploy and manage a cloud in a Linux based Infrastructure as a Service IaaS
