Integrated Regional Assessment of Global Climate Change , *Computer Integrated Manufacturing* L. Faria, W. Van Puymbroeck, 2013-12-14 The impact of CIM Computer Integrated Manufacturing on the competitiveness of industry is nowadays well acknowledged Significant increases in productivity reduction of production costs and the ability to modify operations quickly are amongst the gains made when applying CIM technologies The integration of automation islands and the application of information technology throughout manufacturing and engineering environments constitute key tasks for European industry ESPRIT European Strategic Programme for Research and Development in Information Technology is a pre competitive industry oriented collaborative research and development programme in information technology The programme is managed and co funded by the European Community and is organised in close liaison with industry national administrations and the research Community ESPRIT has the following three objectives To provide the European information technology industry with the basic technologies to meet the competitive requirements of the 1990s To promote European industrial cooperation in information technology To pave the way for standards The CIM part of the ESPRIT programme addresses the application of information technology in industrial environments CIM Europe is an information and awareness activity of ESPRIT Its aim is to consolidate and enhance the effects of ESPRIT CIM by disseminating information on progress and achievements in the programme It stimulates interaction between project teams in CIM and other areas encouraging the development and the application of CIM techniques to the benefit of European industry CIM Europe s main activities are meetings Study Groups Workshops and its Annual Conference and publications Notices and Proceedings Food Security and Global Environmental Change John Ingram, Polly Ericksen, Diana Liverman, 2012-07-26 Global environmental change GEC represents an immediate and unprecedented threat to the food security of hundreds of millions of people especially those who depend on small scale agriculture for their livelihoods As this book shows at the same time agriculture and related activities also contribute to GEC by for example intensifying greenhouse gas emissions and altering the land surface Responses aimed at adapting to GEC may have negative consequences for food security just as measures taken to increase food security may exacerbate GEC The authors show that this complex and dynamic relationship between GEC and food security is also influenced by additional factors food systems are heavily influenced by socioeconomic conditions which in turn are affected by multiple processes such as macro level economic policies political conflicts and other important drivers

The book provides a major accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security. Most other books addressing the subject concentrate on the links between climate change and agricultural production and do not extend to an analysis of the wider food system which underpins food security. This book addresses the broader issues based on a novel food system concept and stressing the need for actions at a regional rather than just an international or local level. It reviews new thinking which has emerged over the last decade, analyses research methods for stakeholder engagement and for undertaking studies at the regional level and looks forward by reviewing a number of emerging hot topics in the food security GEC debate which help set new agendas for the research community at large. Science and the politics of openness

Brigitte Nerlich, Sarah Hartley, Sujatha Raman, Alexander Smith, 2018-02-07. This electronic version has been made available under a Creative Commons BY NC ND open access license. The phrase here be monsters or here be dragons is commonly believed to have been used on ancient maps to indicate unexplored territories which might hide unknown beasts. This book maps and explores places between science and politics that have been left unexplored, sometimes hiding in plain sight in an era when increased emphasis was put on openness. The book is rooted in a programme of research funded by the Leverhulme Trust entitled Making Science Public: Challenges and opportunities which runs from 2014 to 2017. One focus of our research was to critically question the assumption that making science more open and public could solve various issues around scientific credibility, trust and legitimacy. Chapters in this book explore the risks and benefits of this perspective with relation to transparency, responsibility, experts and faith.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation

Intergovernmental Panel on Climate Change, 2012-05-28. Extreme weather and climate events interacting with exposed and vulnerable human and natural systems can lead to disasters. This Special Report explores the social as well as physical dimensions of weather and climate related disasters, considering opportunities for managing risks at local to international scales. SREX was approved and accepted by the Intergovernmental Panel on Climate Change (IPCC) on 18 November 2011 in Kampala, Uganda.

[A Changing Environment for Human Security](#)

Linda Sygna, Karen O'Brien, Johanna Wolf, 2013-06-26. Environmental change presents a new context and new opportunities for transformational change. This timely book will inspire new ways of understanding the relationship between environmental change and human security. A Changing Environment for Human Security: Transformative Approaches to Research Policy and Action both supports and informs a call for new transformative approaches to research policy and action. The chapters in this book include critical analyses, case studies and reflections on contemporary environmental and social challenges with a strong emphasis on those related to climate change. Human thoughts and actions have contributed to an environment of insecurity manifested as multiple interacting threats that now represent a serious challenge to humanity. Yet humans also have the capacity to collectively transform the economic, political, social and cultural systems and structures that perpetuate human insecurities.

These fresh perspectives on global environmental change from an interdisciplinary group of international experts will inspire readers whether students researchers policy makers or practitioners to think differently about environmental issues and sustainability The contributions show that in a changing environment human security is not only a possibility but a choice
