INTRODUCTION: RATIO AND PROPORTION AND UNITARY METHOD	Understand the concepts Ratio and Proportion. Application of unitary method to do the problems	Recollect the concepts of Ratio and Proportion from the children discuss them by using different examples. Ratio means comparison of two quantities in the same unit to say one is "how many times" the other. The ratio of a to b is denoted by a:b or $\frac{a}{b}$ If $a:b = c:d$ then they are said to be equivalent ratios and a, b, c and d are said to be in proportion. Unitary method means 'find the value of one from many and then find the value of required many'. Show the unitary method in different situations.	H/W (Qns from exercises)

Interface Neil Hooley, 2015-04-24 This book investigates professional practice at the interface of sociology and epistemology for progressive educational change It suggests that orthodox sociology and sociology of education have not sufficiently analysed contemporary educational situations due primarily to the strength of the economic and educational influence of neoliberalism In drawing upon key aspects of the work of Dewey Freire Bernstein and Bourdieu a new reflexive sociology of knowledge is proposed that could potentially revolutionise public schooling and emancipate learning This critical reconceptualisation of curriculum and teaching as well as the democratic inclusion of all children into structures of privileged and community knowledge opens up a new epistemological stage in the sociology of education worldwide In confronting the contradiction between social marginalisation and educational expectations Learning at the Practice Interface explores new approaches to education systems and knowledge production Part A raises questions regarding knowledge pedagogy and social justice that are central to schooling and which support values weakened by neoliberalism These values include democracy equity community collaboration and deference towards knowledge and culture not dependent on wealth and status Part B explores practical issues related to how knowledge is engaged in the school curriculum This discussion goes to the heart of learning at the practice interface and suggests that the lack of epistemological strategies based on sociological description has created serious estrangement from school knowledge for large numbers of students Part C discusses a critical view of knowledge in relation to research teaching and learning and the education profession generally The need for a new reflexive sociology of knowledge is proposed to guide educational dialogue and action such that connections can be made between progressive sociology and epistemology in the interests of all children This book will be of interest to academics and researchers in the Sociology of Education Teacher Education and Education Reform
