in corporate finance rationales utilized by credit rating agencies and the assessment of arm's length nature of intra group financing. The author describes ways in which the application of the arm's length principle can be strengthened and how the related risk of distortion and manipulation can be minimized. The solutions and methodologies proposed are applicable to any business sector. Given that determination of the arm's length nature of transactions between related companies is one of the most difficult tasks currently faced by taxpayers and tax administrations around the world, this thorough assessment and analysis will prove extraordinarily useful for in-house and advisory practitioners, corporate officers, academics, international organizations and government officials charged with finding effective responses to the serious issues raised. In addition to its well-researched analysis, the book's comparative overview of how loans, financial guarantees and cash pooling are currently addressed by OECD Member States and by their national courts is of great practical value in business decision making.

Contemporary Issues In The Post-crisis Regulatory Landscape Imad A Moosa, 2016-10-14. The book deals with contemporary issues in financial regulation given the post-crisis regulatory landscape. The major idea put forward is that rampant corruption and fraud in the financial sector provide the main justification for financial regulation. Specific issues that are dealt with include the proposition that the Efficient Market Hypothesis was both a cause and a casualty of the global financial crisis. The book also examines the regulation of remuneration in the financial sector, credit rating agencies and shadow banking. Also considered is financial reform in Iceland and the proposal to move away from fractional reserve banking to a system of sovereign money. A macroeconomic regulatory issue that is also considered is quantitative easing and the resulting environment of ultra-low interest rates.
