The Philosophy of Chemistry Jean-Pierre Llored, 2014-09-26 This volume connects chemistry and philosophy in order to face questions raised by chemistry in our present world The idea is first to develop a kind of philosophy of chemistry which is deeply rooted in the exploration of chemical activities We thus work in close contact with chemists technicians engineers researchers and teachers Following this line of reasoning the first part of the book encourages current chemists to describe their workaday practices while insisting on the importance of attending to methodological metrological philosophical and

epistemological questions related to their activities It deals with sustainable chemistry chemical metrology nanochemistry and biochemistry among other crucial topics In doing so those chemists invite historians and philosophers to provide ideas for future developments In a nutshell this part is a call for forthcoming collaborations focused on instruments and methods that is on ways of doing chemistry The second part of the book illustrates the multifarious ways to study chemistry and even proposes new approaches to doing so Each approach is interesting and incomplete but the emergent whole is richer than any of its components Analytical work needs socio historical expertise as well as many other approaches in order to keep on investigating chemistry to greater and greater depth This heterogeneity provides a wide set of methodological perspectives not only about current chemical practices but also about the ways to explore them philosophically Each approach is a resource to study chemistry and to reflect upon what doing philosophy of science can mean In the last part of the volume philosophers and chemists propose new concepts or reshape older ones in order to think about chemistry The act of conceptualization itself is queried as well as the relationships between concepts and chemical activities Prefaced by Nobel Laureate in Chemistry Roald Hoffmann and by the President of the International Society for the Philosophy of Chemistry Rom Harr this volume is a plea for the emergence of a collective cleverness and aims to foster inventiveness

**Huangbo** Peter J. Gibbs, Kenneth R. Seddon, 1998. Recent research has revealed the importance of the alkaloid berberine in the conservation of documents. The Diamond Sutra along with some 40 000 other documents around the world is dyed yellow with an extract believed to originate from the Amur cork tree of which berberine is the principal colourant. Berberine is present in many plant extracts traditionally used as dyes and pigments for papers and fabrics. This text brings together the results of research into berberine and the Huangbo dye, listing the spectroscopic and chromatographic methods available to detect its presence. In addition, an introductory explanation of the methods available to detect berberine is provided to enable readers without a background in chemistry to appreciate how each technique works. BIODIESEL Safwatun Nida, 2023-07-11. Jumlah penduduk di dunia semakin meningkat dari waktu ke waktu, akibatnya meningkat pula jumlah kebutuhan akan sumber energi. Sumber energi berbasis fosil seperti minyak bumi bersifat tidak terbarukan. Semakin lama jumlah sumber energi berbasis fosil semakin berkurang dan diprediksi tidak dapat memenuhi kebutuhan energi penduduk dunia yang semakin meningkat. Dampak lain dari bahan bakar berbasis fosil adalah terhadap lingkungan karena dapat menyebabkan pemanasan global dan permasalahan lingkungan lainnya. Oleh karena itu, banyak negara di dunia mencari alternatif sumber energi dan beralih ke sumber energi terbarukan seperti energi matahari, energi angin, geothermal, energi hidro, energi bahan bakar nabati, biofuel, dan lain sebagainya. Biosolar atau biodiesel merupakan salah satu jenis bahan bakar terbarukan yang dapat terdegradasi dan memiliki sifat yang mirip dengan bahan bakar solar berbasis fosil.
