

CHAPTER 8

WELDED TRUSS CONNECTIONS

OVERVIEW

Chapter 8 contains design information for HSS-to-HSS truss connections in which (web) members are directly welded to a continuous chord that passes through a column. All connections are assumed to be gusset, predominantly laterally braced, in non-overlapping braced truss and to be primarily axially braced. Connection types or include unbraced T-, Y-, gapped K-, and cross-connections, as well as connections braced by plate stiffeners. Design information is based primarily on D1.1-96, supplemented by selected design information from Packer and Handberg (1997) and the AISC HSS Specification. Design information for overlapped connections can be found in AISC D1.1-96. Information relative to stiffening of joints or concrete filling can be found in Packer and Handberg (1997).

Following is a list of the Chapter content:

TERMINOLOGY AND DEFINITIONS
