

## OVERVIEW

The Human Development Index (HDI) is a statistic composite of development indicators (such as GDP, life expectancy, and others) and used to rank countries into four tiers of human development. HDI takes into account many different indicators that cover edu., health, & quality of life. For future reference, there are two main types of correlations:

- Positive correlations happen when two things are at the same level at the same time or move simultaneously (either one thing is high, the other is high or when one is low, the other is also low)
- Negative correlations happen when two things are at opposite levels simultaneously or move in opposite directions (either one thing is high, the other is low)

**Instructions:** Write a brief definition in your own words for the following terms below and determine if it has a positive or negative correlation for a country/region's HDI (plot the first box with GDP as an example)

| Development Indicators       | Brief Definition (in your own words)                                                                       | Correlation for HDI (positive or negative) |
|------------------------------|------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| Gross Domestic Product (GDP) | The monetary value of all finished goods and services made within a country during a specific time period. | A High GDP: positive correlation           |
| Total Fertility Rate (TFR)   |                                                                                                            | A High TFR:                                |
| Infant Mortality Rate        |                                                                                                            | A High infant mortality rate:              |
