

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is used to break down food into nutrients that can be absorbed by the body. The digestive system is a complex system that includes the mouth, salivary glands, stomach, small intestine, large intestine, and rectum. The digestive system is a continuous tube that starts in the mouth and ends in the rectum.

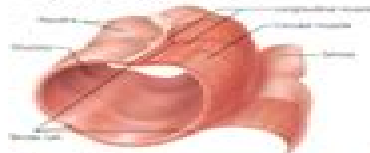

Liver, pancreas & gallbladder

The liver, pancreas, and gallbladder are accessory organs of the digestive system. The liver is the largest organ in the body and is responsible for producing bile, which is stored in the gallbladder. The pancreas is a small organ that is located behind the stomach and is responsible for producing pancreatic juice, which is used to break down food.

Layers of large intestine

Large intestine

The large intestine is the final part of the digestive system. It is responsible for absorbing water and electrolytes from the remaining indigestible food matter. The large intestine is a large, sac-like organ that is located in the lower right and left sides of the abdomen.

Peristaltic action

Peristaltic action is the process by which the digestive system moves food through the tract. It is a series of involuntary contractions and relaxations of the muscles of the digestive tract that push food forward.

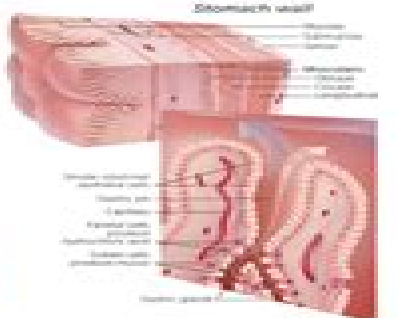

The mouth & salivary glands

The mouth and salivary glands are the first part of the digestive system. The mouth is where food enters the body and is where most digestion begins. The salivary glands produce saliva, which is used to break down food into smaller pieces that can be swallowed.

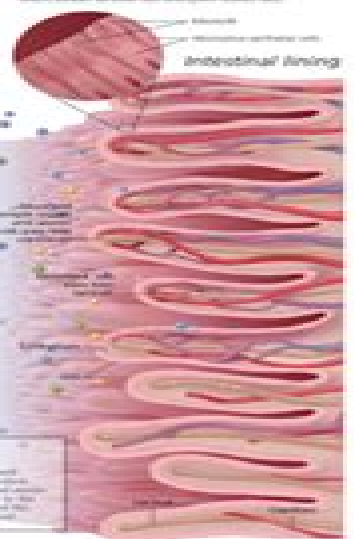

The stomach

The stomach is a large, muscular organ that is responsible for breaking down food into smaller pieces that can be absorbed by the body. It is located in the upper left side of the abdomen.

Small intestine

The small intestine is a long, coiled organ that is responsible for absorbing nutrients from the food that is digested in the stomach. It is located in the upper right side of the abdomen.

Absorption

Absorption is the process by which nutrients from the food are taken up by the body. It occurs in the small intestine and is essential for the body to function properly.
