

BODY AND EXHAUST SYSTEM

Fig. No. 16 The two special tools (Churchill Tool No. JD 23) used when fitting a windscreen

The rubber should be attached to the backlight aperture with the flat side of the rubber facing the inside of the car.

If the car is fitted with a heated backlight, pierce the sealing rubber in the two appropriate positions, Fig. 18, to take the wires which lead to the element.

Fig. No. 17 Removal of rear glass

Using the special tool (A, Fig. 16), insert the backlight into the rubber along the bottom edge first. On cars fitted with heated backlight, feed electrical wires through holes in sealing rubber first (Fig. 18). It is important that the glass is fitted equally. DO NOT fit one end and then try to fit the other. Using the special tool (B, Fig. 16), insert the rubber sealing strip with the rounded wide edge to the outside.

Using a pressure gun filled with a sealing compound and fitted with a copper nozzle (so that it will not scratch the glass) apply the nozzle of the gun between the metal body flange and the rubber and fill with sealing compound (Fig. 19). Also apply sealing compound between the rubber and the glass (Fig. 15).

Remove excess sealing compound with a rag soaked in white spirit, DO NOT USE THINNERS as this will damage the paintwork.

Fig. No. 18 Section through the rear light glass and sealing rubber

Check that there is a small gap between the sealing rubber edge and the depression for the rear glass aperture. This is necessary to allow the chrome finishing strip to seat on the sealing rubber. If the rubber bends hard onto the depression at certain points insert a small length of stiff piping cord $\frac{1}{8}$ " (3.1 mm.) diameter at the required positions, this will facilitate the fitting of the chrome strip. Fit the chrome on top

Fig. No. 19 Using a gun to inject compound between the rubber and the rear glass aperture
