Beyond the Bubble Test Linda Darling-Hammond, Frank Adamson, 2014-05-14 Performance assessment is a hot topic in school systems and educators continue to analyze its costs benefits and feasibility as a replacement for high stakes testing Until now researchers and policymakers have had to dig to find out what we know and what we still have to learn about performance assessment Beyond the Bubble Test How Performance Assessments Support 21st Century Learning synthesizes the latest findings in the field and not a moment too soon Statistics indicate that the United States is in danger of falling behind if it fails to adapt to our changing world The memory and recall strategies of traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy Instead teachers need to engage students in deeper learning assessing their ability to use higher order skills Skills like synthesizing information understanding evidence and critical problem solving are not achieved when we teach to multiple choice exams Examples in Beyond the Bubble Test paint

a useful picture of how schools can begin to supplement traditional tests with something that works better This book provides new perspectives on current performance assessment research plus an incisive look at what's possible at the local and state levels Linda Darling Hammond with a team of leading scholars bring together lessons learned new directions and solid recommendations into a single readily accessible compendium Beyond the Bubble Test situates the current debate on performance assessment within the context of testing in the United States This comprehensive resource also looks beyond our U S borders to Singapore Hong Kong and other places whose reform mindedness can serve as an example to us

A Pedagogical Design for Human Flourishing Cynthia McCallister, 2022-03-28 In *A Pedagogical Design for Human Flourishing Transforming Schools with the McCallister Model* Cynthia McCallister presents a revolutionary paradigm for education that is practical conceptually convincing and grounded in contemporary behavioral science theory Beginning with the assertion that equality of educational opportunity depends on access to experiences that are sufficiently appropriate and rich to enable the achievement of diverse human potentials she provides a comprehensive school design for intervention that demonstrates how to achieve it Grounded in recent advances in learning science McCallister asserts three necessary conditions for learning the need for learners to have access to diverse rich environmental experiences the need for them to enjoy fundamental freedom and autonomy to direct their own learning and access to full and free forms of association In her model these conditions provide what is necessary for learners to coordinate their minds with others to develop their identities personalities and talents These conditions are animated in concrete procedures that can be adapted to a wide variety of populations in formal informal and remote educational settings The procedures take the form of rules that learners comply with in the exercise of their freedom When they are followed the rules provide a grammar for the social norms that govern the moral worlds of learners and compel them to flourish Tested over two decades in her work as a teacher scholar and school reformer in more than 20 NYC public schools the McCallister Method has delivered an innovative and disruptive approach to schooling that has proven successful in finally transforming low performing industrial schools into 21st century learning organizations Online support material includes assessments records surveys and more to be used in school design and classroom settings

The Global and the Local: An Environmental Ethics Casebook Dale Murray, 2017-03-06 In *The Global and the Local: An Environmental Ethics Casebook* Dale Murray presents fifty-one actual, unique, and compelling case studies. The book covers a wide variety of environmental topics, from those as global as overfishing, climate change, ocean acidification, and e-waste to those as local as whether we should place salt on the driveway during winter, construct rain gardens, or believe we have a duty to hunt. The book also features an easy-to-read yet rigorous introductory section exposing readers to ethical theories and approaches to environmental ethics. By interweaving these theoretical considerations into long and short case studies, Murray illuminates a comprehensive range of the most pressing environmental issues facing our biosphere both today and in the future.

Focus On: 100 Most Popular English Emigrants to the United States Wikipedia contributors, **Atlas of Material Worlds** Matthew Seibert, 2021-08-17 *Atlas of Material Worlds* is a highly designed narrative atlas illustrating the agency of nonliving materials with unique, ubiquitous, and often hidden influence on our daily lives. Employing new materialism as a jumping-off point, it examines the increasingly blurry lines between the organic and inorganic, engaging the following questions: What roles do nonliving materials play? Might a closer examination of those roles reveal an undeniable agency we have long overlooked or disregarded? If so, does this material agency change our understanding of the social structures, ecologies, economies, cosmologies, technologies, and landscapes that surround us? And perhaps most importantly, why does material agency matter? This is the story of the world's driest, nonpolar desert, pink flamingos, and cerulean blue lithium ponds; industrial shipping logistics, pudding-like jiggling substrates, and monuments of mud; galactic bodies, radioactive sheep, and the yellowcake of uranium. Put simply, this book dares readers to see the world anew from material up. *Atlas of Material Worlds* offers this new relationship to our host environment in a time of mounting crises: accelerating climate change, ballooning socioeconomic inequality, and rising toxic nationalism. Uniquely telling materialist stories for practitioners and students in landscape architecture and other built environment disciplines.

MI2015: The Nevada mineral industry 2015, 2017-02-10 **Activism and the Fossil Fuel Industry** Andrew Cheon, Johannes Urpelainen, 2018-02-06 In less than a decade, activism against the fossil fuel industry has exploded across the globe. While environmentalists used to focus on legislative goals such as carbon emissions trading or renewable energy policies, today the most prominent activists directly attack the fossil fuel industry. This timely book offers a comprehensive evaluation of different types of activism, the success and impact of campaigns and activities, and suggestions as to ways forward. This book is the first systematic treatment of the anti-fossil fuel movement in the United States. An accessible and readable text, it is an essential reference for scholars, policymakers, activists, and citizens interested in climate change, fossil fuels, and environmental sustainability. The entire book or chapters from it can be used as required or supplementary material in various courses at the undergraduate and graduate level. As the book is not technically challenging,

but contains a comprehensive review of climate change fossil fuels and the literature on environmental activism it can be used as an accessible introduction to the anti fossil fuel campaign across disciplines **Inhabitable Infrastructures** CJ Lim,2017-05-25 Inhabitable Infrastructures Science fiction or urban future the follow up to Food City and Smartcities and Eco Warriors from one of the world s leading urban design and architectural thinkers explores the potential of climate change related multi use infrastructures that address the fundamental human requirements to protect to provide and to participate The stimulus for the infrastructures derives from postulated scenarios and processes gleaned from science fiction and futurology as well as the current body of scientific knowledge regarding changing environmental impacts on cities Science fiction is interdisciplinary by nature aggregates the past and present and evaluates both lay opinions and professional strategies in an attempt to develop foresight and to map possible futures The research culminates in the creation of innovative multi use infrastructures and integrated self sustaining support systems that meet the challenges posed through climate change and overpopulation and the reciprocal benefits of simultaneously addressing the threat and the shaping of cities J G Ballard has written that the psychological realm of science fiction is most valuable in its predictive function and in projecting emotions into the future The knowledge from the book is widely transferable constituting both solutions and speculative visions of future urban environments The book is indispensable reading for professionals and students in the fields of urban design architecture engineering and environmental socio politics **State Assessment**
