THE ORDERS OF INSECTS THE CLASSIFICATION AND PHYLOGENY OF INSECTS The classification of insects has passed through many changes and with the growth of detailed knowledge an increasing number of orders has come to be recognized Handlirsch 1908 and Wilson and Doner 1937 have reviewed the earlier attempts at classification among which the schemes of Brauer 1885 Sharp 1899 and Börner 1904 did much to define the more distinctive recent orders In 1908 Handlirsch published a more revolutionary system incorporating recent and fossil forms which gave the Collembola Thysanura and Diplura the status of three independent Arthropodan classes and considered as separate orders such groups as the Sialoidea Raphidioidea Heteroptera and Homoptera He also split up the old order Orthoptera gave its components ordinal rank and regrouped them with some of the other orders into a subclass Orthopteroidea and another subclass Blattaeformia

Maitland, 2012-12-06 Scotland is fortunate in being very richly endowed with natural fresh waters in the form of numerous lochs and rivers These constitute on the one hand an attractive feature of the landscape and on the other a major resource for industry and recreation Thus there are about 3800 lochs over 4 ha in area and these form approximately 1.0% of the total surface area of Scotland Comparable figures for England and Wales are 1700 lakes and 0.05% of the land surface and in terms of volume Loch Ness contains more water than all the lakes and reservoirs in England and Wales put together Smith Lyle 1979 Many of the Scottish lochs are large and clean and consequently are particularly valuable in resource terms The decision as to which are actually the largest lochs is debatable particularly when the main criteria of greatest surface area length volume and depth each gives a different water Lochs Lomond Awe Ness and Morar respectively These four then are certainly among the largest lochs in the country but close to them in size come several other large waters among which is Loch Shiel which is exceeded in length only by Lochs Awe Ness and Lomond These five very large lochs form the group of waters selected for the comparative studies described in this volume **Selected Water Resources Abstracts**, 1990-05 **Evolution of the Insects** David Grimaldi, Michael S.
