Inhaled induction and topical anesthesia of the airway guided with C-MAC d-Blade videolaryngoscope in a myasthenia gravis patient and difficult airway

RESUMEN

Esto es a caso de a patient diagnosed with myasthenia gravis and clinical predictors of difficult intubation and ventilation undergoing emergency surgery for neurocraneal and cervical section. The patient was successfully intubated solely, with the neuromuscular relaxation, using a C-MAC video laryngoscope and difficult intubation d-Blade, following inhaled induction and topical anesthesia of the airway.

We do want to stress the clinical value of video laryngoscopy in patients with positive predictors of difficult intubation, the applicability of procedure for the maintenance of spontaneous ventilation in a patient solely, as well as the use of hyperventilation for removal of neuromuscular block in a myasthenia patient.
