Minority Report 650 Scientists:

Eric P. Grimsrud, 2009-04-01 We are at a critical moment in the history of human civilization and have a choice to make Are we or are we not going to aggressively and immediately address the issue of anthropogenic global warming Written to provide the general public with a basic scientific understanding of the global warming issue **Thoughts of a Scientist, Citizen, and Grandpa on Climate Change** Eric P. Grimsrud, 2012-05 We are at a critical moment in the history of human civilization and have a choice to make Are we or are we not going to aggressively and immediately address the issue of anthropogenic global warming Written to provide the general public with a basic scientific understanding of the global warming issue **A User's Guide to the Crisis of Civilization** Nafeez Mosaddeq Ahmed, 2010-08-06 It often seems that different crises are competing to devastate civilisation This book argues that financial meltdown dwindling oil reserves terrorism and food shortages need to be considered as part of the same ailing system Most accounts of our contemporary global crises focus on one area such as climate change or the threat of terrorism to the exclusion of others Nafeez Mosaddeq Ahmed argues that the unwillingness of experts to consider crises from an interdisciplinary perspective has resulted in their failure to understand historical events From ecology and the environment to political governance the global economy and international relations Ahmed investigates contemporary crises not as isolated events but as trends and processes that belong to a single global system Ahmed posits that we are therefore not dealing with a clash of civilisations as Samuel P Huntington argued Rather we are dealing with a fundamental crisis of civilisation itself **Update on the Latest Global Warming Science** United States. Congress. Senate. Committee on Environment and Public Works, 2015 **Addressing Global Climate Change** United States. Congress. Senate. Committee on Foreign Relations, 2009 *Congressional Record* United States. Congress, 1997 Changing Climates Charles F. Gritzner, 2010 Introduces middle school readers to the issues that affect the global society Combining geography history science social studies and economics this title examines the topics and their importance to the United States and to the world It shows how the policies and actions of a particular group or region affect others Politically Incorrect Guide to Climate Change Marc Morano, 2018-02-26 Updated to include new section on the Green New Deal The climate scare ends with this book SEAN HANNITY This book arms every citizen with a comprehensive dossier on just how science economics and politics have been distorted and corrupted in the name of saving the planet MARK LEVIN Less freedom More regulation Higher costs Make no mistake those are the surefire consequences of the modern global warming campaign waged by political and cultural elites who have long ago abandoned fact based science for dramatic fearmongering in order to push increased central planning The Politically Incorrect Guide to Climate Change gives a voice backed by statistics real life stories and incontrovertible evidence to the millions of deplorable Americans skeptical about the multibillion dollar climate change complex whose claims have time and time again been proven wrong *Chill, A Reassessment of Global Warming Theory* Peter Taylor, 2012-12-10 Although the world's climate has undergone

many cyclical changes the phrase climate change has taken on a sinister meaning implying catastrophe for humanity ecology and the environment We are told that we are responsible for this threat and that we should act immediately to prevent it But the apparent scientific consensus over the causes and effects of climate change is not what it appears Chill is a critical survey of the subject by a committed environmentalist and scientist Based on extensive research it reveals a disturbing collusion of interests responsible for creating a distorted understanding of changes in global climate Scientific institutions basing their work on critically flawed computer simulations and models have gained influence and funding In return they have allowed themselves to be directed by the needs of politicians and lobbyists for simple answers slogans and targets The resulting policy a 60% reduction of greenhouse gas emissions by 2050 would have a huge almost unimaginable impact upon landscape community and biodiversity On the basis of his studies of satellite data cloud cover ocean and solar cycles Peter Taylor concludes that the main driver of recent global warming has been an unprecedented combination of natural events His investigations indicate that the current threat facing humanity is a period of global cooling comparable in severity to the Little Ice Age of 1400 1700 AD The risks of such cooling are potentially greater than global warming and on a more immediate time scale with the possibility of failing harvests leaving hundreds of millions vulnerable to famine Drawing on his experience of energy policy and sustainability Taylor suggests practical steps that should be taken now He urges a shift away from mistaken policies that attempt to avert inevitable natural changes to an adaptation to a climate that is likely overall to turn significantly cooler
