Investigating Human Interaction through Mathematical Analysis Kurt T. Brintzenhofe, 2023-01-16 Investigating Human Interaction through Mathematical Analysis offers a new and unique approach to social intragroup interaction by using mathematics and psychophysics to create a mathematical model based on social psychological theories It draws on the work of Dr Stanley Milgram Dr Bibb Latane and Dr Bernd Schmitt to develop an algebraic expression and applies it to quantitatively model and explain various independent social psychology experiments taken from refereed journals involving basic social systems with underlying queue like structures It is then argued that the social queue as a resource system containing common pool resources meets the eight design principles necessary to support stability within the queue Making this link provides a means to advance to more complex social systems It is envisioned that if basic social systems as presented can be modeled then with further development more complex social systems may eventually be modeled for the purpose of identifying and validating social structures that might eventually support stable governments in our common environment called Earth This is a fascinating reading for academics and advanced students interested in political theory

Unprocessed Kimberley Wilson, 2023-02-23 We all know that as a nation our mental health is in crisis But what most don't know is that a critical ingredient in this debate and a crucial part of the solution what we eat is being ignored Nutrition has more influence on what we feel who we become and how we behave than we could ever have imagined It affects everything from our decision making to aggression and violence Yet mental health disorders are overwhelmingly treated as mind problems as if the physical brain and how we feed it is irrelevant Someone suffering from depression is more likely to be asked about their relationship with their mother than their relationship with food In this eye opening and impassioned book psychologist Kimberley Wilson draws on startling new research as well as her own work in prisons schools and hospitals around the country to reveal the role of food and nutrients in brain development and mental health from how the food a woman eats during pregnancy influences the size of her baby's brain and hunger makes you mean to how nutrient deficiencies change your personality We must also recognise poor nutrition as a social injustice with the poorest and most vulnerable being systematically ignored We need to talk about what our food is doing to our brains And we need decisive action not over rehearsed soundbites and empty promises from those in

power because if we don't things can only get worse
