

☐ 3. Make sure you are familiar with terms of reference: anterior, posterior, dorsal, ventral. In addition, you'll need to know the following terms:

Medial: toward the middle or middle of the body

Lateral: toward the outside of the body

Proximal: close to a point of reference

Distal: farther from a point of reference

Label the anterior (front), posterior (rear), dorsal (back) and ventral (underside) of the pig. →

☐ 4. Gestation for the fetal pig is 112-115 days. The length of the fetal pig can give you a rough estimate of its age.
 2.5 cm = 40 days | 4 cm = 50 days | 22 cm = 100 days | 30 cm = birth

What is the length of your fetal pig? _____ How old is your fetal pig? _____

☐ 5. Observe the feet of the pig. How many toes are on the feet? _____

☐ 6. Examine the eyes and the upper and lower eyelids. In addition, there is a third eyelid, the nictitating membrane, which covers the anterior portion of the eye and helps to clean it. You need to make a small incision and open the third eye lid to see this.

☐ 7. Locate the snout. The paired external nares (nostrils) located on the snout as the passageway for air.

☐ 8. Locate the external ear, or pinnae, which serve to channel a sound wave into the small opening known as the external auditory meatus.

☐ 9. Open the pig's mouth and locate the hard and soft palate on the roof of the mouth. Can you feel your own hard and soft palate with your tongue?

Note the taste buds (also known as sensory papillae) on the side of the tongue. Locate the esophagus at the back of the mouth. Feel the edge of the mouth for teeth.

Does the fetal pig have teeth? _____ Are humans born with teeth? _____

☐ 10. Carefully lay the pig on one side in your dissecting pan and cut away the skin from the side of the face and upper back to expose the subcutaneous muscles that open and close the mouth, lymph nodes, and salivary glands.

The salivary glands have an appearance like chewing gum, and are often lost if you cut too deeply.

Dissect your specimen [\(watch the video below about dissection\)](#)

☐ 11. Use a scalpel to cut the angles of the jaw so that you can open the mouth up far enough to view the back of the oral cavity. Locate the epiglottis, a cone-shaped structure which closes when a pig swallows. The small opening in the center of the epiglottis is the glottis and it leads to the trachea and then to the lungs. Make sure that you can distinguish the glottis from the esophagus.

☐ 12. The pharynx is the cavity (space) in the back of the mouth – it is the junction for food (esophagus) and air (trachea).
