Harris, Jeffry L. Hirst, Michael J.

Mossinghoff, 2000-07-19 This book evolved from several courses in combinatorics and graph theory given at Appalachian State University and UCLA Chapter 1 focuses on finite graph theory including trees planarity coloring matchings and Ramsey theory Chapter 2 studies combinatorics including the principle of inclusion and exclusion generating functions recurrence relations Pólya theory the stable marriage problem and several important classes of numbers Chapter 3 presents infinite pigeonhole principles König's lemma and Ramsey's theorem and discusses their connections to axiomatic set theory The text is written in an enthusiastic and lively style It includes results and problems that cross subdisciplines emphasizing relationships between different areas of mathematics In addition recent results appear in the text illustrating the fact that mathematics is a living discipline The text is primarily directed toward upper division undergraduate students but lower division undergraduates with a penchant for proof and graduate students seeking an introduction to these subjects will also find much of interest      Condition Monitoring and Assessment of Power Transformers Using Computational Intelligence

W.H. Tang, Q.H. Wu, 2011-01-19 In recent years rapid changes and improvements have been witnessed in the field of transformer condition monitoring and assessment especially with the advances in computational intelligence techniques Condition Monitoring and Assessment of Power Transformers Using Computational Intelligence applies a broad range of computational intelligence techniques to deal with practical transformer operation problems The approaches introduced are presented in a concise and flowing manner tackling complex transformer modelling problems and uncertainties occurring in transformer fault diagnosis Condition Monitoring and Assessment of Power Transformers Using Computational Intelligence covers both the fundamental theories and the most up to date research in this rapidly changing field Many examples have been included that use real world measurements and realistic operating scenarios of power transformers to fully illustrate the use of computational intelligence techniques for a variety of transformer modelling and fault diagnosis problems Condition Monitoring and Assessment of Power Transformers Using Computational Intelligence is a useful book for professional engineers and postgraduate students It also provides a firm foundation for advanced undergraduate students in power engineering      **Measurement Uncertainty** Simona Salicone, 2007-06-04 It is widely recognized by the scientific and technical community that measurements are the bridge between the empirical world and that of the abstract concepts and knowledge In fact measurements provide us the quantitative knowledge about things and phenomena It is also widely recognized that the measurement result is capable of providing only incomplete information about the actual value of the

measurand that is the quantity being measured Therefore a measurement result comes useful in any practical situation only if a way is defined for estimating how incomplete is this information The more recent development of measurement science has identified in the uncertainty concept the most suitable way to quantify how incomplete is the information provided by a measurement result However the problem of how to represent a measurement result together with its uncertainty and propagate measurement uncertainty is still an open topic in the field of metrology despite many contributions that have been published in the literature over the years Many problems are in fact still unsolved starting from the identification of the best mathematical approach for representing incomplete knowledge Currently measurement uncertainty is treated in a purely probabilistic way because the Theory of Probability has been considered the only available mathematical theory capable of handling incomplete information However this approach has the main drawback of requiring full compensation of any systematic effect that affects the measurement process However especially in many practical applications the identification and compensation of all systematic effects is not always possible or cost effective
