

Ozymandias by Percy Bysshe Shelley

Overview of the Poem and Context:

Written in 1817 after Shelley saw Egyptian statues retrieved from the desert in the British Museum. Shelley was a Romantic poet, writing about the power of nature and the depth of human emotion. The narrator meets a traveller who tells him about a statue standing in the middle of the desert in Egypt. The statue is of a king and the inscription brags about how powerful he was when alive. The statue has now tumbled down and is half buried in the sand.

Key Language Features:

The language is often powerful and angry, showing the aggression of the king/pharaoh: 'voice of cold command'. Irony is used to show how the king's bold words mean nothing in the face of nature - the inscription is juxtaposed against the 'decay of the colossal wreck' and the barrenness of the desert.

Key Quotations:

'a shatter'd visage', 'voice of cold command', 'colossal wreck, boundless and bare'

Themes:

Power of nature/
humans, Pride.

Potential Links:

The power of nature can also be found in 'The Prelude', 'Exposure' and 'Storm on the Island'. Pride is also expressed in Browning's 'My Last Duchess'.

Key Structural Features:

The poem is a sonnet in structure. It has a turning point (volta) at line 8. The enormity of the desert rounds off the poem, showcasing the power of nature.

Teaching Reading Comprehension to English Learners in Secondary Schools: A Research-Based Approach Cekiso, Madoda, Olifant, Florence, Mokhtari, Kouider, 2025-04-23 Teaching reading comprehension to English learners ELs in secondary schools presents unique challenges as these students must navigate the complexities of academic texts and the intricacies of language acquisition. Effective instruction requires a research-based approach that considers the diverse linguistic, cultural, and cognitive backgrounds of these learners. Recent studies highlight the importance of integrating strategies that build both language proficiency and content knowledge, essential for helping ELs develop the skills needed to comprehend complex materials. Fostering metacognitive awareness through strategies like summarizing, questioning, and making connections can empower students to become active and strategic readers. This approach recognizes the need for a supportive, inclusive classroom environment that encourages language development while promoting academic achievement in content areas. Further research may help educators provide English learners with the tools to thrive as capable readers in secondary school. Teaching Reading Comprehension to English Learners in Secondary School: A Research-Based Approach explores various aspects of teaching reading comprehension to English Second Language (ESL) learners in secondary schools. It examines current challenges and evidence-based strategies in reading comprehension. This book covers topics such as language learning, reading strategies, and teacher training, and is a useful resource for academicians, researchers, and scientists.

Handbook of Research on Teaching in Multicultural and Multilingual Contexts Charamba, Erasmos, 2022-06-24 Several factors have resulted in increased intra and inter-state migration. This has led to an increase in the enrollment of students with diverse linguistic backgrounds, placing more academic demands on educators. Linguistic diversity presents both opportunities and challenges for educators across the educational spectrum. Language ideologies profoundly shape and constrain the use of language as a resource for learning in multilingual or linguistically diverse classrooms. While English has become the world language, most communities remain and are becoming more and more multicultural, multilingual, and diverse. The Handbook of Research on Teaching in Multicultural and Multilingual Contexts moves beyond the constraints of current language ideologies and enables the use of a wide range of resources from local semiotic repertoires. It examines the phenomenon of language use, language teaching, multiculturalism, and multilingualism in different learning areas, giving practitioners a voice to spotlight their efforts in order to keep their teaching afloat in culturally and linguistically diverse situations. Covering topics such as Indigenous languages, multilingual deaf communities, and intercultural competence, this major reference work is an essential resource for educators of both K-12 and higher education, pre-service teachers, educational psychologists, linguists, education administrators, and policymakers, government officials, researchers, and academicians.

four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Abstract Mathematical Cognition Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts
