and innovation      **Poverty and Climate Change** Fitzroy B. Beckford, 2018-09-10 Most if not all of the global biogeochemical cycles on the earth have been broken or are at dangerous tipping points. These broken cycles have expressed themselves in various forms as soil degradation and depletion, ocean acidification, global warming and climate change. The best proposal for an organic solution to fixing the myriad broken cycles is a deliberate investment in solutions that first acknowledge the historic roles played by both the subjugated peoples and the economic beneficiaries of the environmental exploitations of the past. Ever since Europeans made contact with the West, a series of global circumstances including the genocide of the indigenous people of the Americas, the enslavement and global subjugation of Africans, and the emergence of Western concepts of trade dominance and capitalism have led to deleterious impacts on the global biogeochemical cycles. Addressing the broken biogeochemical cycles should be done with a clear understanding that it was not only human subjects which were subjugated but also land, water and air. These three global stores must be replenished from the ideological position that poverty is not simply the absence of money but is also the lack of access to non-polluting energy sources, to clean air devoid of runaway greenhouse gases, and to local conditions devoid of climate change instabilities. With this in mind, the global powerbrokers can enter into a new deal with developing nations, shifting the paradigm toward a new ecological approach that rewards good behavior and sets new standards of worldwide relations based on ecologic inclusivity rather than the exclusive economic arrangements currently in order. Harnessing a forward-thinking approach to analyzing the current global environmental crisis, this book will be of great interest to students and scholars of sustainable development, political ecology, sustainable agriculture, climate change, and environmental justice.

**Managing Global Risks in the Urban Age** Yee-Kuang Heng, 2016-03-03 The first full-length exposition of what it terms a global city-global risks nexus, this volume crosses disciplinary boundaries to draw upon research from Security Studies, Geography, Sociology, and Urban Studies. Innovative in its approach, integrating theories about Global Cities with those positing a Global Risk Society, Yee-Kuang Heng positions this research in the midst of two concurrent global trends that will gain more significance in coming years. The world is experiencing the consequences of not only rapid globalisation but also urbanization. In 2008, the UN declared that more than half the world's population was now urban. At the same time, highly connected global cities like New York, London, Tokyo, and Singapore also face rapidly spreading global risks such as pandemics and financial crises. Unique in developing a typology of global risks that threaten a global city like Singapore beyond its Asian focus, the book also draws out thematic and policy lessons pertinent to other global cities. Global cities do not simply materialize. They are dependent on a range of stakeholders at various levels that produce and re-produce its command and control capabilities in the face of global risks. Singapore's experiences managing global risks in the financial, aviation, and maritime domains are common concerns shared by many countries and cities that have or aspire to develop similar critical infrastructure.
