Impact on Antioxidants in Beverages presents information key to understanding how antioxidants change during production  
of beverages how production options can be used to enhance antioxidant benefit and how to determine the production  
process that will result in the optimum antioxidant benefit while retaining consumer acceptability In the food industry  
antioxidants are added to preserve the shelf life of foods and to prevent off flavors from developing These production added  
components also contribute to the overall availability of essential nutrients for intake Moreover some production processes  
reduce the amount of naturally occurring antioxidants Thus in terms of food science it is important to understand not only  
the physiological importance of antioxidants but what they are how much are in the different food ingredients and how they  
are damaged or enhanced through the processing and packaging phases This book specifically addresses the composition  
and characterization of antioxidants in coffee green tea soft drinks beer and wine Processing techniques considered here  
include fermentation and aging high pressure homogenization enzymatic debittering and more Lastly the book considers  
several selective antioxidant assays such as Oxygen Radical Absorbance Capacity ORAC and Trolox Equivalent Antioxidant  
Capacity TEAC assays Provides insights into processing options for enhanced antioxidant bioavailability Presents correlation  
potentials for increased total antioxidant capacity Includes methods for the in situ or in line monitoring of antioxidants to  
reduce industrial loss of antioxidants in beverages Proposes processing of concentrated fractions of antioxidants that can be

used of both God and the state This ambitious and original work explores the relations between these images and their  
political context through the analogy between divine and civil government and considers what images of God may
