thus to convert to point slope form first convert to slope intercept form then move the constant term b to the left side of the equation or isolate x and then divide by the y coefficient example convert  $3x + 4y = 8$  to point slope form

**point slope slope intercept equations algebra video khan academy** - Mar 17 2023

point slope is the general form  $y - y_1 = m(x - x_1)$  for linear equations it emphasizes the slope of the line and a point on the line that is not the y intercept we can rewrite an equation in point slope form to be in slope intercept form  $y = mx + b$  to highlight the same line s slope and y intercept

overview of different forms of a line's equation there are many different ways that you can express the equation of a line there is the slope intercept form standard form and also this page's topic point slope form each one expresses the equation of a line and each one has its own pros and cons point slope form this page's topic makes it easy to find the line's

*intro to point slope form algebra video khan academy* - Aug 22 2023

the point slope form is very useful when you don't have your y intercept it is used to write equations when you only have your slope and a point point slope form  $y - y_1 = m(x - x_1)$  for example your slope m is 3 and your point a b is 9 10 you would substitute your y coordinate for a and your x coordinate for b
