Ames,2019-11-19 A fascinating examination of technological utopianism and its complicated consequences In The Charisma Machine Morgan Ames chronicles the life and legacy of the One Laptop per Child project and explains why despite its failures the same utopian visions that inspired OLPC still motivate other projects trying to use technology to disrupt education and development Announced in 2005 by MIT Media Lab cofounder Nicholas Negroponte One Laptop per Child promised to transform the lives of children across the Global South with a small sturdy and cheap laptop computer powered by a hand crank In reality the project fell short in many ways starting with the hand crank which never materialized Yet the project remained charismatic to many who were captivated by its claims of access to educational opportunities previously out of reach Behind its promises OLPC like many technology projects that make similarly grand claims had a fundamentally flawed vision of who the computer was made for and what role technology should play in learning Drawing on fifty years of history and a seven month study of a model OLPC project in Paraguay Ames reveals that the laptops were not only frustrating to use easy to break and hard to repair they were designed for technically precocious boys idealized younger versions of the developers themselves rather than the children who were actually using them The Charisma Machine offers a cautionary tale about the allure of technology hype and the problems that result when utopian dreams drive technology development
