Manual of Extracorporeal Membrane Oxygenation (ECMO) in the ICU Poonam Malhotra Kapoor, 2013-09-30

Extracorporeal Membrane Oxygenation ECMO is a procedure that uses a machine to take over the work of the lungs and sometimes the heart. The system provides heart lung bypass support using a pump to circulate blood through an artificial lung back into the bloodstream providing enough oxygen to the patient whilst allowing time for the lungs and heart to rest or heal during or after serious illness. ECMO is often used for babies but can also be used for children and adults. Medline Plus The techniques for ECMO require professionals from multidisciplinary background to be involved in the procedure. This practical manual is a comprehensive guide to ECMO. Divided into eleven sections, the book begins with an introduction to the procedure and equipment. The following sections provide step by step discussion on initiation, maintenance of support and monitoring and techniques of ECMO for different case scenarios. The final sections present multiple choice questions for self assessment and extensive appendices. Key points Comprehensive guide to Extracorporeal Membrane Oxygenation ECMO Highly relevant for intensivists, anaesthesiologists, surgeons, paediatricians and cardiologists. Includes section of multiple choice questions for self assessment. More than 186 full colour images and illustrations. **ECMO-Extracorporeal Life**

Support in Adults Fabio Sangalli, Nicolò Patroniti, Antonio Pesenti, 2014-04-30 Extracorporeal membrane oxygenation ECMO has been in clinical use for some 40 years but it is only in the past decade that its application in the treatment of life threatening circulatory and respiratory failure has truly flourished. This book presents a comprehensive overview of both pathophysiological and practical aspects of circulatory and respiratory extracorporeal support. The basics of ECMO including its history, the ECMO team, cannulation, materials and blood surface interactions are first discussed. The various indications for and particular characteristics of circulatory and respiratory extracorporeal life support are then described in detail in the main part of the book. Patient care during ECMO and monitoring of the ECMO patient are also carefully covered with explanation of the management of technical and clinical complications and transport related problems. Further topics include long term therapy options beyond ECMO such as ventricular assist devices and transplants, outcome, the new frontiers of ECMO for organ procurement and future challenges. The authors are well known experts in the field whose authoritative contributions and attention to practical aspects will be invaluable for novices and experienced practitioners alike. **ISCCM**
