

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] circles are females and squares are males.
- [I] is shaded = affected = square indicates that a person has the trait.

The pedigree seen below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1 = 11. Then answer the questions below the table.

What did you learn from the genotype of the mother of I?

These parents (I) had a color blind son (II). His dad has no recessive, but color blind allele from his mother. Since the mother is not shaded she must be a carrier.

Number II is color blind just like his father. Where could he get his allele for color blindness?

Yes, he inherited his allele for color blindness from his mother. Must have been that 1% chance from her carrier status. From their father.

Number number II and II were color blind. How did they have a color blind son (III)?

That mother (II) was a carrier for color blindness.

What must be the genotype of the parents of a color blind daughter? Explain.

To have a color blind daughter, she would have to inherit the color blind allele from each parent. Her father must be X^c Y and mother would have to be X^c X^c.

If mother II has a normal son, what is the probability that their son will be color blind?

$X^N X^c \times X^c Y \rightarrow$ all of their sons will have color blind.

(50%) (normal male)

Choose A Healthy Puppy or Kitten Emma Milne, 2018-11-02 Getting a new puppy or kitten is such an exciting time for any family and should be the start of a beautiful long friendship Picking a breed can be difficult and is sometimes a choice made on an impulse because a certain look or character seems to be just what you want Sadly a snap decision can turn into heartache if the breed you pick doesn't suit your lifestyle or has health issues that you didn't know about Some breeds of dogs and cats have body shapes that are not healthy and can cause a lifetime of discomfort Selective breeding has produced features like short faces tiny legs long backs huge ears and lots of skin wrinkles Some breeds also have high levels of inherited disease like heart problems These unnatural exaggerations and inherited issues can not only mean big bills and frequent visits to the vet but also a less than ideal life for your pet This book will help you avoid the breeds most affected by health problems We look at what Mother Nature and evolution picked for cats and dogs compared to what man has done through breeding Hopefully you will start to see these odd body shapes not as normal for a breed but as unhealthy changes to our beautiful cats and dogs We'll also look at how you can try to find the best breeder possible and avoid the likes of puppy farmers who care more about money than their animals Somewhere out there a puppy or kitten is waiting to become a cherished part of your family and I hope this book will help you find the right one Dogs and cats are wonderful animals and enrich our lives so let's try and make sure that they are as healthy and happy as possible 5m Books
