**Shelf Life Evaluation of Foods** Dominic Man, C.M.D. Man, Adrian A. Jones, 2000-07-31 The best selling first edition of this contributed book established itself as a highly practical and authoritative source of information on shelf life evaluation Every food manufacturer is concerned about shelf life as are the major retailers and ingredient suppliers Increasing consumer interest in food safety quality and date marking competitive

pressures from retailers and extensive legislative changes have combined to give this subject new significance. A proper evaluation of shelf life must be grounded on sound scientific principles supported by up to date techniques. This book begins with six chapters reviewing the principles of shelf life evaluation followed by ten chapters on a number of selected food products such as chilled yogurt and other dairy desserts, seafood and meat. The latest edition has been expanded to include new chapters on HACCP preservation technology and shelf life and minimally processed ready to eat ambient stable meat products. Sufficient information on the principles and practice of shelf life evaluation has been included for the beginner as well as for those who are more experienced in this area. *Microbiology Handbook* Rhea Fernandes, 2009-02-20. Milk and dairy products form a central part of the human diet as they are rich in nutrients. On the other hand because of their high nutrient value they favour rapid microbial growth. In some cases this microbial growth is beneficial while in others it is undesirable. Dairy products may be contaminated with pathogens or microbial toxins therefore the microbiology of these products is of key interest to those in the dairy industry. *Microbiology Handbook Dairy Products* provides readers with an easy to use reference to microorganisms found in milk and dairy products. The handbook covers initial microflora, sources of contamination, effects of processing on the survival and growth of microorganisms, spoilage and hazards identified with the consumption of these products. First published in 1995 the book is now in its 3rd edition underlining its usefulness as a reference guide. As with the previous editions this fully updated book presents the information under the following key product categories: Liquid Milk Products, Concentrated and Dried Milk, Cream, Butter and Spreads, Cheese, Fermented Milks, Ice cream Products. HACCP and contact information for various food authorities sections have also been revised.

**Principles and Applications of Modified Atmosphere Packaging of Foods** B. Blakistone, 2013-12-14. Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms. Shelf lives of perishable products such as dairy products, meat, poultry, fish, fruits and vegetables and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere: 21 % oxygen, 78% nitrogen and less than 0.1 % carbon dioxide and growth of spoilage organisms. Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms. Of course deterioration is also slowed by chilling which is required for the transport to market of highly perishable items like meat, poultry and fish that would either spoil or have the potential for contamination by certain food pathogens. Chilling plus a modification of the atmosphere optimizes the keeping quality of food. Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century. Modified atmosphere packaging (MAP) is practised extensively in Europe, Canada and the US. Both vacuum packaging (removal of air from the package) and addition of gases within the package are
