## Maths Memo June 2013:

*Caught in the Act* Cyril Julie, Lorna Holtman, Charles R. Smith, 2019-12-11 The research reported in *Caught in the Act* draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers

**A Complete Classification of the Isolated Singularities for Nonlinear Elliptic Equations with Inverse Square Potentials** Florica

C. Cîrstea, 2014-01-08 In particular for  $b = 1$  and  $0$  we find a sharp condition on  $h$  such that the origin is a removable singularity for all non negative solutions of eqref one thus addressing an open question of Vázquez and Vron

*An Excursion Through Discrete Differential Geometry* American Mathematical Society. Short Course, Discrete Differential Geometry, 2020-09-02 Discrete Differential Geometry DDG is an emerging discipline at the boundary between mathematics and computer science It aims to translate concepts from classical differential geometry into a language that is purely finite and discrete and can hence be used by algorithms to reason about geometric data In contrast to standard numerical approximation the central philosophy of DDG is to faithfully and exactly preserve key invariants of geometric objects at the discrete level This process of translation from smooth to discrete helps to both illuminate the fundamental meaning behind geometric ideas and provide useful algorithmic guarantees This volume is based on lectures delivered at the 2018 AMS Short Course Discrete Differential Geometry held January 8-9 2018 in San Diego California The papers in this volume illustrate the principles of DDG via several recent topics discrete nets discrete differential operators discrete mappings discrete conformal geometry and discrete optimal transport

**Adelic Divisors on Arithmetic Varieties** Atsushi Moriawaki, 2016-06-21 In this article the author generalizes several fundamental results for arithmetic divisors such as the continuity of the volume function the generalized Hodge index theorem Fujita's approximation theorem for arithmetic divisors Zariski decompositions for arithmetic divisors on arithmetic surfaces and a special case of Dirichlet's unit theorem on arithmetic varieties to the case of the adelic arithmetic divisors

*Singularity Theory for Non-Twist KAM Tori* A. González-Enríquez, A. Haro, R. de la Llave, 2014-01-08 In this monograph the authors introduce a new method to study bifurcations of KAM tori with fixed Diophantine frequency in parameter dependent Hamiltonian systems It is based on Singularity Theory of critical points of a real valued function which the authors call the potential The potential is constructed in such a way that nondegenerate critical points of the potential correspond to twist invariant tori i.e. with nondegenerate torsion and degenerate critical points

of the potential correspond to non twist invariant tori Hence bifurcating points correspond to non twist tori On the Theory of Weak Turbulence for the Nonlinear Schrodinger Equation M. Escobedo, J. J. L. Velázquez, 2015-10-27 The authors study the Cauchy problem for a kinetic equation arising in the weak turbulence theory for the cubic nonlinear Schrödinger equation They define suitable concepts of weak and mild solutions and prove local and global well posedness results Several qualitative properties of the solutions including long time asymptotics blow up results and condensation in finite time are obtained The authors also prove the existence of a family of solutions that exhibit pulsating behavior **Weighted Bergman Spaces Induced by Rapidly Increasing Weights** Jose Angel Pelaez, Jouni Rattya, 2014-01-08 This monograph is devoted to the study of the weighted Bergman space  $A_{p, \omega}$  of the unit disc  $\mathbb{D}$  that is induced by a radial continuous weight  $\omega$  satisfying  $\lim_{r \rightarrow 1} \int_r^1 \omega(s) ds = 0$  Every such  $A_{p, \omega}$  lies between the Hardy space  $H^p$  and every classical weighted Bergman space  $A_{p, \alpha}$  Even if it is well known that  $H^p$  is the limit of  $A_{p, \alpha}$  as  $\alpha \rightarrow 1$  in many respects it is shown that  $A_{p, \omega}$  lies closer to  $H^p$  than any  $A_{p, \alpha}$  and that several finer function theoretic properties of  $A_{p, \alpha}$  do not carry over to  $A_{p, \omega}$  *Global Flood Hazard* Guy J-P. Schumann, Paul D. Bates, Heiko Apel, Giuseppe T. Aronica, 2018-06-05 Global Flood Hazard Subject Category Winner PROSE Awards 2019 Earth Science Selected from more than 500 entries demonstrating exceptional scholarship and making a significant contribution to the field of study Flooding is a costly natural disaster in terms of damage to land property and infrastructure This volume describes the latest tools and technologies for modeling mapping and predicting large scale flood risk It also presents readers with a range of remote sensing data sets successfully used for predicting and mapping floods at different scales These resources can enable policymakers public planners and developers to plan for and respond to flooding with greater accuracy and effectiveness Describes the latest large scale modeling approaches including hydrological models 2 D flood inundation models and global flood forecasting models Showcases new tools and technologies such as Aqueduct a new web based tool used for global assessment and projection of future flood risk under climate change scenarios Features case studies describing best practice uses of modeling techniques tools and technologies Global Flood Hazard is an indispensable resource for researchers consultants practitioners and policy makers dealing with flood risk flood disaster response flood management and flood mitigation *Lie Algebras, Lie Superalgebras, Vertex Algebras and Related Topics* Kailash C. Misra, Daniel K. Nakano, Brian J. Parshall, 2016-06-28 This book contains the proceedings of the 2012 2014 Southeastern Lie Theory Workshop Series held at North Carolina State University in April 2012 at College of Charleston in December 2012 at Louisiana State University in May 2013 and at University of Georgia in May 2014 Some of the articles by experts in the field survey recent developments while others include new results in representations of Lie algebras and quantum groups vertex operator algebras and Lie superalgebras *Cognitive Communication and Cooperative HetNet Coexistence* Maria-Gabriella Di Benedetto, Faouzi Bader, 2014-01-16 This book written by experts from universities and major

Suppose that  $D \leq n/2$ . Then every  $D$ -regular graph  $G$  on  $n$  vertices has a decomposition into Hamilton cycles and at most one perfect matching. iii Optimal packings of Hamilton cycles Suppose that  $G$  is a graph on  $n$  vertices with minimum degree  $\geq n/2$ . Then  $G$  contains at least  $\lfloor n/2 \rfloor$  edge disjoint Hamilton cycles. Here  $\lfloor n/2 \rfloor$  denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on  $n$  vertices with minimum degree  $i$  was first explicitly stated by Chetwynd and Hilton ii and the special case  $n/2$  of iii answer questions of Nash Williams from 1970. All of the above bounds are best possible.

**Research Memorandum**, 1947 *Climate Shock* Gernot Wagner, Martin L. Weitzman, 2016-04-19 How knowing the extreme risks of climate change can help us prepare for an uncertain future. If you had a 10 percent chance of having a fatal car accident you'd take necessary precautions. If your finances had a 10 percent chance of suffering a severe loss you'd reevaluate your assets. So if we know the world is warming and there's a 10 percent chance this might eventually lead to a catastrophe beyond anything we could imagine why aren't we doing more about climate change right now? We insure our lives against an uncertain future why not our planet? In *Climate Shock* Gernot Wagner and Martin Weitzman explore in lively clear terms the likely repercussions of a hotter planet drawing on and expanding from work previously unavailable to general audiences. They show that the longer we wait to act the more likely an extreme event will happen. A city might go underwater. A rogue nation might shoot particles into the Earth's atmosphere. Geoengineering cooler temperatures. Zeroing in on the unknown extreme risks that may yet dwarf all else the authors look at how economic forces that make sensible climate policies difficult to enact make radical would be fixes like geoengineering all the more probable. What we know about climate change is alarming enough. What we don't know about the extreme risks could be far more dangerous. Wagner and Weitzman help readers understand that we need to think about climate change in the same way that we think about insurance as a risk management problem only here on a global scale. With a new preface addressing recent developments Wagner and Weitzman demonstrate that climate change can and should be dealt with and what could happen if we don't do so tackling the defining environmental and public policy issue of our time.

*Dark Mirror* Barton Gellman, 2021-05-18 Engrossing Gellman is a thorough exacting reporter a marvelous narrator for this particular story as he nimbly guides us through complex technical arcana and some stubborn ethical questions. *Dark Mirror* would be simply pleasurable to read if the story it told didn't also happen to be frighteningly real. Jennifer Szalai The New York Times

From the three time Pulitzer Prize winner and author of the New York Times bestseller Angler the definitive master narrative of Edward Snowden and the modern surveillance state based on unique access to Snowden and groundbreaking reportage around the world Edward Snowden touched off a global debate in 2013 when he gave Barton Gellman Laura Poitras and Glenn Greenwald each a vast and explosive archive of highly classified files revealing the extent of the American government's access to our every communication They shared the Pulitzer Prize that year for public service For Gellman who never stopped reporting that was only the beginning He jumped off from what Snowden gave him to track the reach and methodology of the U S surveillance state and bring it to light with astonishing new clarity Along the way he interrogated Snowden's own history and found important ways in which myth and reality do not line up Gellman treats Snowden with respect but this is no hagiographic account and Dark Mirror sets the record straight in ways that are both fascinating and important Dark Mirror is the story that Gellman could not tell before a gripping inside narrative of investigative reporting as it happened and a deep dive into the machinery of the surveillance state Gellman recounts the puzzles dilemmas and tumultuous events behind the scenes of his work in top secret intelligence facilities in Moscow hotel rooms in huddles with Post lawyers and editors in Silicon Valley executive suites and in encrypted messages from anonymous accounts Within the book is a compelling portrait of national security journalism under pressure from legal threats government investigations and foreign intelligence agencies intent on stealing Gellman's files Throughout Dark Mirror Gellman wages an escalating battle against unknown adversaries who force him to mimic their tradecraft in self defense With the vivid and insightful style that is the author's trademark Dark Mirror is a true life spy tale about the surveillance industrial revolution and its discontents Along the way with the benefit of fresh reporting it tells the full story of a government leak unrivaled in drama since All the President's Men

C-Projective Geometry David M Calderbank, Michael G.

Eastwood, Vladimir S. Matveev, Katharina Neusser, 2021-02-10 The authors develop in detail the theory of almost complex projective geometry a natural analogue of projective differential geometry adapted to almost complex manifolds The authors realise it as a type of parabolic geometry and describe the associated Cartan or tractor connection A Kähler manifold gives rise to a

projective structure and this is one of the primary motivations for its study. The existence of two or more Kähler metrics underlying a given complex projective structure has many ramifications which the authors explore in depth. As a consequence of this analysis they prove the Yano–Obata Conjecture for complete Kähler manifolds: if such a manifold admits a one-parameter group of complex projective transformations that are not affine, then it is complex projective space equipped with a multiple of the Fubini–Study metric.
