Michael W. seeing how well or badly AI compares to human intelligence They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations complex games e g chess Go and poker diagnosis from medical images and robotic surgery However the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think infer reason and understand while engaging in information processing In fact such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence At a time when human commitment to AI appears unstoppable this up to date book advocates a symbiotic and co operative relationship between humans and AI It will be essential reading for anyone interested in AI and human cognition
