Parliamentary Debates (Hansard). Great Britain. Parliament. House of Commons, 2014

Advances in Credit Risk Modeling and Management Frédéric Vrans, 2020-07-01 Credit risk remains one of the major risks faced by most financial and credit institutions It is deeply connected to the real economy due to the systemic nature of some banks but also because well managed lending facilities are key for wealth creation and technological innovation This book is a collection of innovative papers in the field of credit risk management Besides the probability of default PD the major driver of credit risk is the loss given default LGD In spite of its central importance LGD modeling remains largely unexplored in the academic literature This book proposes three contributions in the field Ye Bellotti exploit a large private dataset featuring non performing loans to design a beta mixture model Their model can be used to improve recovery rate forecasts and therefore to enhance capital requirement mechanisms François uses instead the price of defaultable instruments to infer the determinants of market implied recovery rates and finds that macroeconomic and long term issuer specific factors are the main determinants of market implied LGDs Cheng Cirillo address the problem of modeling the dependency between PD and LGD using an original urn based statistical model Fadina Schmidt propose an improvement of intensity based default models by accounting for ambiguity around both the intensity process and the recovery rate Another topic deserving more attention is trade credit

which consists of the supplier providing credit facilities to his customers Whereas this is likely to stimulate exchanges in general it also magnifies credit risk This is a difficult problem that remains largely unexplored Kanapickiene Spicas propose a simple but yet practical model to assess trade credit risk associated with SMEs and microenterprises operating in Lithuania Another topical area in credit risk is counterparty risk and all other adjustments such as liquidity and capital adjustments known as XVA Chataignier Cr pey propose a genetic algorithm to compress CVA and to obtain affordable incremental figures Anagnostou Kandhai introduce a hidden Markov model to simulate exchange rate scenarios for counterparty risk Eventually Boursicot et al analyzes CoCo bonds and find that they reduce the total cost of debt which is positive for shareholders In a nutshell all the featured papers contribute to shedding light on various aspects of credit risk management that have so far largely remained unexplored

The First Wave Loke Hoe Yeong, 2019-09-30 Based on extensive interviews and archival material The First Wave tells the story of the opposition in Singapore in its critical first thirty years in Parliament Democratisation has been described to occur in waves The first wave of a democratic awakening in post independence Singapore began with J B Jeyaretnam s victory in the Anson by election of 1981 That built up to the 1984 general election the first of many to be called a watershed in which Chiam See Tong was also elected in Potong Pasir After their successes in 1991 the opposition began dreaming of forming the government But their euphoria was short lived Serious fault lines in the leading Singapore Democratic Party SDP rose to the surface almost immediately after the opposition victories of 1991 and the party was wiped out of Parliament by 1997 The opposition spent the next decade experimenting with coalition arrangements to work their way back to victory

*Debates in Mathematics Education* Gwen Ineson, Hilary Povey, 2020-06-15 This new and updated second edition of Debates in

Mathematics Education explores the major issues that mathematics teachers encounter in their daily lives. By engaging with established and contemporary debates, this volume promotes and supports critical reflection and aims to stimulate both novice and experienced teachers to reach informed judgements and argue their point of view with deeper theoretical knowledge and understanding. Divided into five accessible sections, this book investigates and offers fresh insight into topics of central importance in mathematics education, with this second edition including new discussions and chapters on Classic and contemporary issues of pedagogy, politics, philosophy and sociology of mathematics education. International comparisons of achievement. Digital technologies for teaching. Mastery in mathematics. Pop culture and mathematics. Whether mathematics can be harmful. Designed to stimulate discussion and support you in your own research, writing and practice through suggested questions and activities throughout. Debates in Mathematics Education will be a valuable resource for any student or practising teacher and those engaged in initial teacher education, continuing professional development or Master's level study. This book also has much to offer to those leading mathematics departments in schools and initial teacher education programmes and to beginning doctoral students looking for a survey of the field of mathematics education research.

The Truth About Our Schools Melissa Benn, Janet Downs, 2015-11-06. A superb, crucial, blistering expose of all the myths about our education system that are all too often used to attack it. Melissa Benn again proves why she is one of country's most formidable education campaigners and why the powerful should fear her. Owen Jones, Guardian columnist and best-selling author. Never has it been more urgent to publicise the truth about what works and doesn't work in our education system. Debunking the ideology of marketisation and exposing the half-truths that pass for objective reporting, Benn and Downs meticulously lay out the evidence that a national system of comprehensive schools delivers the best outcomes. This hugely important book should be required reading for each new Education Secretary. Caroline Lucas, MP. Opinions about comprehensive education are often made into easy-to-swallow sound bites by media and politicians alike and whilst the benefits of a genuinely comprehensive education for all pupils are obvious, untruths have unwittingly evolved into hard facts. Based on Melissa Benn and Janet Downs' work as part of the pioneering Local Schools Network, The Truth About Our Schools calls for us to urgently and articulately challenge unquestioned myths about state education. Benn and Downs have meticulously built an argument for its still enormously vital role and rigorously challenge assumptions that Comprehensive education has failed. Local authorities control and hold back schools. Choice, competition and markets are the route to educational success. Choice will improve education in England, the free school model. Academies raise standards. Teachers don't need qualifications. Private schools have the magic DNA. Progressive education lowers standards. Anyone who thinks that comprehensive education cannot deliver that local authorities are the chief block to improving our school system that competition and markets are the route to educational success and that private schools hold the magic DNA that can simply be transferred to other state schools will have their beliefs shaken by this blisteringly incisive book.
