Tribes and Territories in the 21st Century Paul Trowler, Murray Saunders, Veronica Bamber, 2012-01-25 The tribes and territories metaphor for the cultures of academic disciplines and their roots in different knowledge characteristics has been used by those interested in university life and work since the early 1990s This book draws together research data and theory to show how higher education has gone through major change since then and how social theory has evolved in parallel Together these changes mean there is a need to re theorise academic life in a way which reflects changed contexts in universities in the twenty first century and so a need for new metaphors Using a social practice approach the editors and contributors argue that disciplines are alive and well but that in a turbulent environment where many other forces conditioning academic practices exist their influence is generally weaker than before However the social practice approach adopted in the book highlights how this influence is contextually contingent how disciplines are deployed in different ways for different purposes and with varying degrees of purchase This important book pulls together the latest thinking on the subject and offers a new framework for conceptualising the influences on academic practices in universities It brings together a distinguished group of scholars from across the world to address questions such as Have disciplines been displaced by inter disciplinarity having outlived their

usefulness Have other forces acting on the academy pushed disciplines into the background as factors shaping the practices of academics and students there How significant are disciplinary differences in teaching and research practices What is their significance in other areas of work in universities This timely book addresses a pressing concern in modern education and will be of great interest to university professionals managers and policy makers in the field of higher education **Training**

Engineering Students for Modern Technological Advancement Alves, Anabela Carvalho, van Hattum-Janssen, Natascha, 2021-12-17 Engineering education leads the preparation of the next generation of engineers This is a difficult task as engineering practices rapidly evolve pressured by the technological advancements promoted by these same engineers Engineering schools are integrated into large and rigid higher education institutions HEI that are not known for their agility Nevertheless engineering educators must have the agility to go beyond HEI boundaries to close the gap between professional practice needs and engineering education Training Engineering Students for Modern Technological Advancement examines the role of engineering teachers in preparing the next generation of engineers and presents perspectives on active learning methods for engineering education As such it contributes to bypassing the compartmentalized way of course organization typical in many HEIs and prepares for more agile engineering education Covering topics such as game based teaching methods Industry 4.0 and management skills this book is a dynamic resource ideal for engineers engineering professors engineering students general educators engineering professionals academicians and researchers CARE Mohd Fadzli Bin Abdollah, 2014-10-09 This book is a compilation of Researcher Profiles from Centre for Advanced Research on Energy CARE
