Geomorphological Hazards And Disaster Prevention:

Geomorphological Hazards and Disaster Prevention Irasema Alcántara, Andrew S. Goudie, 2010-03-04 A state of the art assessment of how geomorphology contributes to the comprehension mapping and modelling of hazardous Earth surface processes

Geomorphological Hazards and Disaster Prevention Irasema Alcántara-Ayala, Andrew S. Goudie, 2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth s surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy

Disaster's Impact on Livelihood and Cultural Survival Michele Companion, 2015-03-16 Many facets of disasters generate interest among scholars and practitioners However a vital area of disaster research is consistently underemphasized Little is written about the immediate and long term impacts on a community s livelihood systems and the customs and practices of the culture affected Disaster s Impact on Livelihood and Cultural S

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform

scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Geomorphic Approaches to Integrated Floodplain Management of Lowland Fluvial Systems in North America and Europe Paul F. Hudson, Hans

Middelkoop, 2015-04-29 This volume provides a comprehensive perspective on geomorphic approaches to management of lowland alluvial rivers in North America and Europe Many lowland rivers have been heavily managed for flood control and navigation for decades or centuries resulting in engineered channels and embanked floodplains with substantially altered sediment loads and geomorphic processes Over the past decade floodplain management of many lowland rivers has taken on new importance because of concerns about the potential for global environmental change to alter floodplain processes necessitating revised management strategies that minimize flood risk while enhancing environmental attributes of floodplains influenced by local embankments and upstream dams Recognition of the failure of old perspectives on river management and the need to enhance environmental sustainability has stimulated a new approach to river management The manner that river restoration and integrated management are implemented however requires a case study approach that takes into account the impact of historic human impacts to the system especially engineering The river basins examined in this volume provide a representative coverage of the drainage of North America and Europe taking into account a range of climatic and physiographic provinces They include the 1 Sacramento California USA 2 San Joaquin California 3 Missouri Missouri USA 4 Red Manitoba Canada and Minnesota USA 5 Mississippi Louisiana USA 6 Kissimmee Florida USA 7 Ebro Spain 8 Rhone France 9 Rhine Netherlands 10 Danube Romania and 11 Volga Russian Federation Rivers The case studies covered in these chapters span a range of fluvial modes of adjustment including sediment channel hydrologic regime
