McMillan, 2009-12-24 In *Biotechnology for Fuels and Chemicals* The Twenty Eighth Symposium leading US and international researchers from academia industry and government exchange cutting edge technical information and update current trends in the development and application of biotechnology for sustainable production of fuels and chemicals This symposium emphasizes advances in biotechnology to produce high volume low price products from renewable resources while improving the environment The major areas of interest include advanced feedstock production and processing enzymatic and microbial biocatalysis bioprocess research and development opportunities in biorefineries and commercialization of biobased products International and domestic progress on producing liquid biofuels especially ethanol and biodiesel is highlighted and related topics including bioseparations and optimal integration of biochemical and thermochemical conversion technologies are featured Forward looking and authoritative *Biotechnology for Fuels and Chemicals* The Twenty Eighth Symposium provides an illuminating overview of current research and development in the production of commodity fuels and chemicals from renewable biomass resources via biochemical and thermochemical routes Microemulsions as stepping stones to greener organic chemistry Nadja Wulff, 2015-01-16 In organic chemistry the simultaneous solubility of hydrophobic and hydrophilic reactants in a common solvent is an ubiquitous problem Often either an expensive or a toxic solvent is needed Alternatively polar and non polar components are mixed into macroemulsions permitting them to react across the internal interface However macroemulsions display a comparatively small interfacial area Thus the reaction rate is low Microemulsions feature an inherent vast interfacial area which facilitates significantly higher reaction rates Furthermore they allow a rather simple monitoring of the reaction kinetics by observing changes in the phase behavior In this work the advantages of microemulsions as efficient reaction media for the photochemically induced Patern B chi reaction of pyruvic acid and 1 octene are elucidated The amphiphilic reaction product 3 hexyl 2 methyloxetane 2 carboxylic acid influences the phase behavior of the microemulsion system significantly With increasing UV exposure time the point of highest efficiency was shifted to lower temperatures and interestingly an increase of efficiency was detected Hence the newly created amphiphile acts as an efficient hydrophobic

cosurfactant. Additionally, with small angle neutron scattering and freeze fracture electron microscopy, it was shown that the bicontinuous microstructure survives UV irradiation. Another route towards green organic chemistry was opened by characterization of two new sustainable biosurfactants, mannosylerythritolipids (MEL) and cellobioselipids (CL) in microemulsions.
