When installing the open source software, it is suggested, however, not to use the software directly on the computer, but rather to install it on a virtual machine (VM) environment. After this, the software can be installed on the computer, to enable the user to use the software. The installation of the software on the computer is not recommended, as it is not possible to install the software on a computer that is not a virtual machine. The software is not recommended for use on a computer that is not a virtual machine.

- 1. **Identify** what the computer is connected to (the network). Identify that the computer is connected to the network and the computer LAN is connected and successfully connected.
- 2. **Check** the printer and the computer on the same network or network. A small network that is part of a larger network. If the computer is not a different network than the printer, the network connection can be established.
 - a) **Compare** the printer IP address range on the IP Management page with the IP address of the computer. If the first octet of the IP address is the same, the printer and the computer are on the same network. If the printer and the computer are not on the same network, the computer IP address range will be 192.168 and the printer IP address range will be 10.0.0.0. Therefore, the printer and the computer are not on the same network.
- 3. **Be** notified of network use in the network connection.
