A Journey in Mathematics Education Research Erna Yackel, Koen Gravemeijer, Anna Sfard, 2010-11-30 Our objective is to publish a book that lays out the theoretical constructs and research methodologies within mathematics education that have been developed by Paul Cobb and explains the process of their development We propose to do so by including papers in which Cobb introduced new theoretical perspectives and methodologies into the literature each preceded by a substantive accompanying introductory paper that explains the

motivation rationale for developing the new perspectives and or methodologies and the processes through which they were developed and Cobb s own retrospective comments In this way the book provides the reader with heretofore unpublished material that lays out in considerable detail the issues and problems that Cobb has confronted in his work that from his viewpoint required theoretical and methodological shifts advances and provides insight into how he has achieved the shifts advances The result will be a volume that in addition to explaining Cobb s contributions to the field of mathematics education also provides the reader with insight into what is involved in developing an aggressive and evolving research program When Cobb confronts problems and issues in his work that cannot be addressed using his existing theories and frameworks he looks to other fields for theoretical inspiration A critical feature of Cobb s work is that in doing so he consciously appropriates and adapts ideas from these other fields to the purpose of supporting processes of learning and teaching mathematics He does not simply accept the goals or motives of those fields As a result Cobb reconceptualizes and reframes issues and concepts so that they result in new ways of investigating exploring and explaining phenomena that he encounters in the practical dimensions of his work which include working in classrooms with teachers and with school systems The effect is that the field of mathematics education is altered Other researchers have found his new ways of looking useful to them And they in turn adapt these ideas for their own use The complexity of many of the ideas that Cobb has introduced into the field of mathematics education can lead to a multiplicity of interpretations by practitioners and by other researchers based on their own experiential backgrounds Therefore by detailing the development of Cobb s work including the tensions involved in coming to grips with and reconciling apparently contrasting perspectives the book will shed additional light on the processes of reconceptualization and thus help the reader to understand the reasons mechanisms and outcomes of researchers constant pursuit of new insights

Re-imagining University Assessment in a Digital World Margaret Bearman,Phillip Dawson,Rola Ajjawi,Joanna Tai,David Boud,2020-07-13 This book is the first to explore the big question of how assessment can be refreshed and redesigned in an evolving digital landscape There are many exciting possibilities for assessments that contribute dynamically to learning However the interface between assessment and technology is limited Often assessment designers do not take advantage of digital opportunities Equally digital innovators sometimes draw from models of higher education assessment that are no longer best practice This gap in thinking presents an opportunity to consider how technology might best contribute to mainstream assessment practice Internationally recognised experts provide a deep and unique consideration of assessment s contribution to the technology mediated higher education sector The treatment of assessment is contemporary and spans notions of assessment for learning measurement and the roles of peer and self within assessment Likewise the view of educational technology is broad and includes gaming learning analytics and new media The intersection of these two worlds provides opportunities dilemmas and exemplars This book serves as a reference for best practice and also guides future thinking about new ways of conceptualising designing and implementing assessment
