A student investigated the effect of ethanol on the permeability of beetroot cell membranes. In this investigation, 10 identical pieces were cut from one beetroot. One piece of beetroot was left in 10 cm³ of 30% ethanol for 20 minutes at 20 °C.

After 20 minutes, the piece of beetroot was removed and the intensity of the colour of the ethanol solution was measured using a colorimeter.

This was repeated with other pieces of beetroot that were left in ethanol concentrations of 0%, 50%, 70% and 100%, at 20 °C.

The student repeated this investigation with the other five pieces of beetroot at the same temperature of 20 °C. The graph below shows the results of these investigations.

- (a) Using the information in the graph, describe the effect of ethanol concentration on the intensity of colour.
