

The background of the book cover is a detailed space-filling molecular model. It features a central chain of green spheres (likely carbon) connected by bonds, with various white spheres (likely hydrogen) and smaller light blue spheres (likely oxygen) attached. The model is set against a white background with two large, semi-transparent teal rectangular blocks. One block is at the top, containing the authors' names, and the other is at the bottom, containing the edition information and a disclaimer.

Bases moleculares de la vida Del Riesgo Prendes, Lilia, Garzón Fernández, Ruth, Castillo Rivera, Fabio, 2010-09-29 Con este nuevo libro pretendemos contribuir a la orientación del aprendizaje acerca de las características moleculares de las células y la comprensión de las modificaciones que estas sufren en su interacción con el entorno asimismo ofrecer una guía para que los estudiantes que comienzan sus aprendizajes en la educación superior y particularmente en la Bioquímica logren comprender los conceptos relacionados con la estructura y la función de las principales biomoléculas encargadas de la vida celular La comprensión teórica de los conceptos está directamente relacionada con su aplicación práctica de tal forma que se ha establecido una serie de orientaciones para su abordaje experimental buscando con ello que los estudiantes desarrollen sus

capacidades de análisis discursivo y desempeño en el ámbito experimental El estudio consecuente y comprometido de estas orientaciones se convertirá en una excelente herramienta para el aprendizaje con comprensión de la relación entre la estructura y función de las biomoléculas que hacen posible la vida en nuestro planeta

Biochemistry for Sport and Exercise Metabolism Donald MacLaren, James Morton, 2011-12-12 How do our muscles produce energy for exercise and what are the underlying biochemical principles involved These are questions that students need to be able to answer when studying for a number of sport related degrees This can prove to be a difficult task for those with a relatively limited scientific background Biochemistry for Sport and Exercise Metabolism addresses this problem by placing the primary emphasis on sport and describing the relevant biochemistry within this context The book opens with some basic information on the subject including an overview of energy metabolism some key aspects of skeletal muscle structure and function and some simple biochemical concepts It continues by looking at the three macromolecules which provide energy and structure to skeletal muscle carbohydrates lipids and protein The last section moves beyond biochemistry to examine key aspects of metabolism the regulation of energy production and storage Beginning with a chapter on basic principles of regulation of metabolism it continues by exploring how metabolism is influenced during high intensity prolonged and intermittent exercise by intensity duration and nutrition

Key Features A clearly written well presented introduction to the biochemistry of muscle metabolism Focuses on sport to describe the relevant biochemistry within this context In full colour throughout it includes numerous illustrations together with learning objectives and key points to reinforce learning Biochemistry for Sport and Exercise Metabolism will prove invaluable to students across a range of sport related courses who need to get to grips with how exercise mode intensity duration training status and nutritional status can all affect the regulation of energy producing pathways and more important apply this understanding to develop training and nutrition programmes to maximise athletic performance
