

Minibeasts

Snail

Snails live in damp, dark places; if it is too dry they hide in their shell. The shell on the back of a snail is like a house that they take around with them, to hide in and use as a shelter. Snails have four tentacles, two of these tentacles are eyes and two are for feeling around for food. Snails normally eat small parts of plants like leaves. Unlike most mini beasts, snails have no legs; they use their slime to slither along as they have no bones in their body.

Ant

Ants are one of the smallest mini beasts; they have six legs and two antennae on their heads which are used for touch and smell. There are more ants in the world than any other animal. Even though they are very small, ants can carry 20 times their body weight. They live in huge colonies underground, usually in parks, woods and gardens. Ants will normally eat anything that they can. Some ants have wings, but only queen and male ants. All of the worker and soldier ants are females.

Beetle

Beetles have 3 body parts and 3 pairs of legs. All parts of their body are attached to the middle part, called the thorax. They have two eyes and antennae on their heads, which they use to see and feel around. Beetles have two pairs of wings, the front pair is shell like, it lies over and protects the second pair of wings. Beetles tend to eat leaves and plants. Some beetles are experts at digging (burrowing), others are brilliant swimmers. There are many different types of beetles.
