## Key Math Concepts

- Sales tax = price of item  $\times$  sales tax rate
- A piecewise function gives a set of rules for each set of the function. The domain is defined by the inequalities that follow *when*.

## Guided Exercises

1. Enrique plans to sell his car and places a 6-line ad. His paper charges \$42 for the first two lines and \$6.75 per extra line to run the ad for one week. What will Enrique's ad cost to run for three weeks?

Number of lines over 2:  $6 - 2 = \underline{\hspace{2cm}}$

Cost of extra lines = number of extra lines  $\times$  cost of each extra line

Cost of extra lines =  $4 \times 6.75 = \underline{\hspace{2cm}}$

Total cost of ad = number of weeks(cost of the first two lines + cost of extra lines)

Total cost of ad =  $\underline{\hspace{2cm}}(\underline{\hspace{2cm}} + \underline{\hspace{2cm}}) = \underline{\hspace{2cm}}$

The total cost of Enrique's car ad is  $\underline{\hspace{2cm}}$ .

2. The Fort Salonga News charges \$29.50 for a classified ad that is four or fewer lines long. Each line above four lines costs an additional \$5.25. Express the cost of an ad algebraically as a piecewise function.

There are two rules:

1) the charges for ads  $\underline{\hspace{2cm}}$

2) the charges for ads above  $\underline{\hspace{2cm}}$

For rule 1:  $c(x) = \underline{\hspace{2cm}}$  when  $\underline{\hspace{2cm}}$

For rule 2:  $c(x) = \underline{\hspace{2cm}} + \underline{\hspace{2cm}}(x - 4)$  when  $\underline{\hspace{2cm}}$

The piecewise function is:

$c(x) = \begin{cases} \underline{\hspace{2cm}} & \text{when } \underline{\hspace{2cm}} \\ \underline{\hspace{2cm}} + \underline{\hspace{2cm}}(\underline{\hspace{2cm}}) & \text{when } \underline{\hspace{2cm}} \end{cases}$
