Financial Reporting And Analysis 5th Edition Alexander:

The Nature of Accounting Regulation Ian Dennis, 2013-10-15 Accounting standards are an essential element in the regulation of current financial reporting. Standard setters promulgate such standards and companies and professional accountants follow them in preparing financial reports. Although much has been written about the history of standard setting, the conceptual underpinnings of accounting standards, the process of setting them, and whether such standards should be rules based or principles based, there has been little written about the kind of thing they are. This book examines the nature of accounting standards and the very idea of a rule of implementation, guidance, and of the objectives that are included in them. It enables the reader to grasp the reasons for promulgating standards, the role of the conceptual framework in setting standards in an institutional context, and the kind of rules that are useful in regulating financial reporting. The insights provided by this examination are used to throw light on the distinction between principles based and rules based standards, and on the nature of good accounting standards.

researchers Management and Cost Accounting Andreas Taschner, Michel Charifzadeh, 2020-09-01 Management and cost accounting has been the basic toolbox in business administration for decades Today it is an integral part of all curricula in

business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general and management accounting in particular is becoming more and more international. English clearly has evolved as the lingua franca of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. Management and Cost Accounting is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level. Bachelor but also suited for MBA courses due to strong focus on practical applications and cases. This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard. It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis, break-even analysis is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.
