Asymmetric Crisis in Europe and Possible Futures Johannes Jäger, Elisabeth Springler, 2015-04-10 The crisis in Europe is often discussed as a crisis of European integration or a crisis of national economies within Europe Both the methodological Europeanism and methodological nationalism miss out the important links between economic and political processes at different spatial scales within Europe and therefore asymmetries and phenomena of uneven development In addition a discussion of possible scenarios which systematically addresses the implications of anti crisis policies is missing This volume seeks to close this gap by systematically integrating the analysis of economic policy or technical solutions to the crisis within a broader framework of political economy It argues that combining critical political economy approaches and post Keynesian perspectives allows for a systematic understanding of the economic and political dimensions of the crisis Although both approaches have the capacity to deal with asymmetries and uneven development the heterogeneity in Europe has been an often largely neglected dimension of analysis However this recent crisis has shown that this is an essential dimension which has to be addressed in order to better understand the dynamics of European development and integration Hence this book aims to deal with asymmetries in Europe and to bridge the gap between the two perspectives This work will initiate an integrative debate that is crucial for a deeper understanding of the current crisis and is an important resource for all students and scholars of IPE European political economy and European politics

Economic Aspects of Genocides, Other Mass Atrocities, and Their Prevention Charles H. Anderton, Jurgen Brauer, 2016-05-09 Alongside other types of mass atrocities genocide has received extensive scholarly policy and practitioner attention Missing however is the contribution of economists to better understand and prevent such crimes This edited collection by 41 accomplished scholars examines economic aspects of genocides other mass atrocities and their prevention Chapters include numerous case studies e g California s Yana people Australia s Aborigines peoples Stalin s killing of Ukrainians Belarus the Holocaust Rwanda DR Congo Indonesia Pakistan Colombia Mexico s drug wars and the targeting of suspects during the Vietnam war probing literature reviews and completely novel work based on extraordinary country specific datasets Also included are chapters on the demographic gendered and economic class nature of genocide Replete with research and policy relevant findings new insights are derived from behavioral economics law and economics political economy macroeconomic modeling microeconomics development economics industrial organization identity economics and other fields Analytical approaches include constrained optimization theory game theory and sophisticated statistical work in data mining econometrics and forecasting A foremost finding of the book concerns atrocity architects purposeful strategic use of violence often manipulating nonrational proclivities among ordinary people to sway their participation in mass murder Relatively

understudied in the literature the book also analyzes the options of victims before during and after mass violence Further the book shows how well intended prevention efforts can backfire and increase violence how wrong post genocide design can entrench vested interests to reinforce exclusion of vulnerable peoples and how businesses can become complicit in genocide In addition to the necessity of healthy opportunities in employment education and key sectors in prevention work the book shows why new genocide prevention laws and institutions must be based on reformulated incentives that consider insights from law and economics behavioral economics and collective action economics
