**The Underrepresentation of Women in Science: International and Cross-Disciplinary Evidence and Debate** Stephen J. Ceci,Wendy M. Williams,Shulamit Kahn,2018-04-20 There is no shortage of articles and books exploring women s underrepresentation in

science Everyone is interested academics politicians parents high school girls and boys women in search of college majors administrators working to accommodate women's educational interests the list goes on But one thing often missing is an evidence based examination of the problem uninfluenced by personal opinions accounts of lived experiences anecdotes and the always encroaching inputs of popular culture This is why this special issue of Frontiers in Psychology can make a difference In it a diverse group of authors and researchers with even more diverse viewpoints find themselves united by their empirical objective approaches to understanding women's underrepresentation in science today The questions considered within this special issue span academic disciplines methods levels of analysis and nature of analysis what these article share is their scholarly evidence based approach to understanding a key issue of our time

### **School Policies and Practices**

**Affecting Instruction in Mathematics** Evelyn K. Hawkins, Frances B. Stancavage, John A. Dossey, 1998 The teaching and learning of mathematics continues to generate tremendous attention both among those who support recent innovations and more recently among those who question the wisdom of the promulgated reforms In order to bring an empirical basis to this debate it is important to gather information on the policies and practices that are actually implemented This report provides one source for such information and is the second in a series that discusses results from the National Assessment of Educational Progress NAEP A description of the educational policies and practices that prevailed during this period of sustained increases in mathematics achievement giving particular attention to the relationship between these policies practices and student performance on the NAEP mathematics assessment Information on the status of mathematics education in 1996 is provided and changes that took place from the time of earlier NAEP assessments is also chronicled ASK

**Bulletin** United States. Office of Education,1911      **Reconceptualizing Early Mathematics Learning** Lyn D. English,Joanne T.

Mulligan,2013-05-09 This book emanated primarily from concerns that the mathematical capabilities of young children continue to receive inadequate attention in both the research and instructional arenas Research over many years has revealed that young children have sophisticated mathematical minds and a natural eagerness to engage in a range of mathematical activities As the chapters in this book attest current research is showing that young children are developing complex mathematical knowledge and abstract reasoning a good deal earlier than previously thought A range of studies in prior to school and early school settings indicate that young learners do possess cognitive capacities which with appropriately designed and implemented learning experiences can enable forms of reasoning not typically seen in the early years Although there is a large and coherent body of research on individual content domains such as counting and arithmetic there have been remarkably few studies that have attempted to describe characteristics of structural development in young students mathematics Collectively the chapters highlight the importance of providing more exciting relevant and challenging 21st century mathematics learning for our young students The chapters provide a broad scope in their topics and approaches to advancing young children s mathematical learning They incorporate studies that highlight the importance of pattern and structure across the curriculum studies that target particular content such as statistics early algebra and beginning number and studies that consider how technology and other tools can facilitate early mathematical development Reconceptualising the professional learning of teachers in promoting young children s mathematics including a consideration of the role of play is also addressed
