

## What is CAT4?

The *Cognitive Abilities Test (CAT)* is a suite of tests that assesses a student's reasoning (thinking) abilities in key areas that support educational development and academic attainment. *CAT4* is the fourth edition of the test and comprises the following sections or batteries which assess different aspects of ability:

### Verbal Reasoning Battery – thinking with words

#### Verbal Classification

Three words are presented which are similar in some way or ways. From a selection of five possible answers, the student must identify a fourth word with similar properties.

The answer is snow because rain, fog and sunshine are all types of weather and snow is also a type of weather.

#### Verbal Analogies

A pair of connected words is presented alongside a single word. From a selection of five possible answers, the student must select a word to complete the second pair in the same way.

The answer is window, because a carpet goes on a floor and a curtain hangs at a window.

### Quantitative (or Numerical) Reasoning Battery – thinking with numbers

#### Number Analogies

Two pairs of related numbers are presented. From a selection of five possible answers, the student must select a number to complete a third pair.

The answer is 8. Here 1 add 1 makes 2, but that doesn't work for the second pair because 5 add 1 is 6, not 10. Instead, you have to multiply by 2 to get the second part of each pair, so 4 times 2 is 8.

#### Number Series

A sequence of numbers created by a transformation rule is presented. From a selection of five possible answers, the student must identify the rule and continue the sequence.

The answer is 15. There are two number patterns in this series. The first, third and fifth numbers go down by 1 at a time – 18, 17 then 16. The numbers in between them go up by two at a time – 5, 7 then 9. This means the next number must be 16 minus 1, giving 15.

**The Fractured Marketplace for Standardized Testing** Walter M. Haney, George F. Madaus, Robert Lyons, 2012-12-06 Standardized testing in the United States has been increasing at a rapid pace in the last twenty five years The market for tests has not only been expanding rapidly but has also been changing sharply in structure into a fractured marketplace Indeed one of the main features of this book is that the market for standardized testing is highly fractured with segments of the market facing monopoly conditions others facing oligopoly conditions and still others where near free market conditions exist One of the main premises of the book is that the structures of markets have strong implications for how those markets perform While this notion is widely accepted among economists it is not widely appreciated in educational research A second motivation for the book is that very little scholarly attention has been focused on the standardized testing industry This topic the structure of the testing industry and implications for the quality of tests and test use affects how we evaluate

the learning of students the effectiveness of teaching the quality of schools and the educational health of the nation Of particular concern to the authors is one vital aspect of test quality test validity This book is the most current and authoritative review and analysis of the market for standardized testing *DHEW Publication No. (OE). ,1974* **Math plus Reading, Grades 3 - 4** ,2012-09-01 Your child s summer partner in building grade 4 success Summer Link Math plus Reading offers third grade children skill and drill practice in key subject areas to help them get ready for fourth grade over the summer months Aligned to state and national **Handbook of the Economics of Education** Eric A.
