Ltd,195? **Fuel Filter Test Methods** Filter Test Methods Standards Committee,1999 The purpose of this fuel filter test method is to provide standardized methods for evaluating the performance characteristics of fuel filters by bench test methods This combined with data obtained from application tests may be used to establish standards of performance for filters when tested by these standard methods Many variations in requirements of filtration to protect fuel supply equipment on engines and variations in operating conditions make it difficult to specify meaningful in service performance standards by which a filter may be judged By the use of these standard test methods test conditions are always the same and comparisons of the laboratory performance of filters may be made with a high degree of confidence Once the requirements of a particular application are known performance standards for suitable filters may be established by these test methods and adequacy of performance of filters for the job may be determined In order to achieve the highest degree of reliability of test results the

procedures and equipment must conform to those specified in this code No minimum performance requirements for filters have been specified since these are the responsibility of the user and manufacturer Only the methods of determining interpreting and reporting performance characteristics are the proper province of this SAE Recommended Practice **Fuel Filter Test Methods** Society of Automotive Engineers.
