*Error-Correcting Codes, Finite Geometries and Cryptography* Aiden A. Bruen, David L. Wehlau, 2010-09-03 This interdisciplinary volume contains papers from both a conference and special session on Error Control Codes Information Theory and Applied Cryptography The conference was held at the Fields Institute in Toronto On Canada from December 5 6 2007 and the special session was held at the Canadian Mathematical Society's winter meeting in London ON Canada from December 8 10 2007 The volume features cutting edge theoretical results on the Reed Muller and Reed Solomon codes classical linear codes codes from nets and block designs LDPC codes perfect quantum and orthogonal codes iterative decoding magnetic storage and digital memory devices and MIMO channels There are new contributions on privacy reconciliation resilient functions cryptographic hash functions and new work on quantum coins Related original work in finite geometries concerns two weight codes coming from partial spreads 0 1 matrices with forbidden configurations Andre embeddings and representations of projective spaces in affine planes Great care has been taken to ensure that high expository standards are met by the papers in this volume Accordingly the papers are written in a user friendly format The hope is that this volume will be of interest and of benefit both to the experienced and to newcomers alike Block Error-Correcting Codes Sebastian Xambo-Descamps, 2012-12-06 Error correcting codes have been incorporated in numerous working communication and memory systems This book covers the mathematical aspects of the theory of block error correcting codes together in mutual reinforcement with computational discussions implementations and examples of all relevant concepts functions and algorithms This combined approach facilitates the reading and understanding of the subject The digital companion of the book is a non printable pdf document with hyperlinks The examples included in the book can be run with just a mouse click and modified and saved by users for their own purpose Code of Federal Regulations, 1999 Special edition of the Federal Register containing a codification of documents of general applicability and future effect with ancillaries **A Functional Description of the Edvac [an Automatically-sequence Serial Binary Electronic Digital Computer]** Moore School of Electrical Engineering, 1949 **The Codes of California as Amended and in Force at the Close of the Thirty-sixth Session of the Legislature, 1905 ...: Civil code** California, 1908 **Error-Correcting Linear Codes** Anton Betten, Michael Braun, Harald Friepertinger, Adalbert Kerber, Axel Kohnert, Alfred Wassermann, 2006-09-21 The fascinating theory of error correcting codes is a rather new addition to the list of mathematical disciplines It grew out of the need to communicate information electronically and is currently no more than 60 years old ing an applied discipline by definition a surprisingly large number of pure mathematical areas tie into Coding Theory If one were to name just the most important connections one would start of course with Linear Algebra then list Algebra and Combinatorics and further mention Number Theory and ometry as well as Algebraic Geometry Being a thorough introduction to the eld this book starts from the very beginning which is the channel model of communication in the presence of noise From there we develop the

fundamental concepts of error correcting codes like the Hamming metric and the maximum likelihood decoding principle After discussing dual codes and simple decoding procedures this book takes an unusual turn The standard approach would be to move on from there and introduce either more theory or present standard constructions of codes The approach taken here is different

**Integer Programming and Related Areas** C. Kastning,2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

**VLSI Architectures for Modern Error-Correcting Codes** Xinmiao Zhang,2017-12-19 Error correcting codes are ubiquitous They are adopted in almost every modern digital communication and storage system such as wireless communications optical communications Flash memories computer hard drives sensor networks and deep space probing New generation and emerging applications demand codes with better error correcting capability On the other hand the design and implementation of those high gain error correcting codes pose many challenges They usually involve complex mathematical computations and mapping them directly to hardware often leads to very high complexity VLSI Architectures for Modern Error Correcting Codes serves as a bridge connecting advancements in coding theory to practical hardware implementations Instead of focusing on circuit level design techniques the book highlights integrated algorithmic and

architectural transformations that lead to great improvements on throughput silicon area requirement and or power consumption in the hardware implementation The goal of this book is to provide a comprehensive and systematic review of available techniques and architectures so that they can be easily followed by system and hardware designers to develop encoder implementations that meet error correcting performance and cost requirements This book can be also used as a reference for graduate level courses on VLSI design and error correcting coding Particular emphases are placed on hard and soft decision Reed Solomon RS and Bose Chaudhuri Hocquenghem BCH codes and binary and non binary low density parity check LDPC codes These codes are among the best candidates for modern and emerging applications due to their good error correcting performance and lower implementation complexity compared to other codes To help explain the computations and encoder architectures many examples and case studies are included More importantly discussions are provided on the advantages and drawbacks of different implementation approaches and architectures
