Thinking Geographically Alaric Maude, 2023-12-22 This book explains how the concepts of geography can teach young people to think geographically deeply and ethically Thinking Geographically demonstrates how the concepts of place space environment and interconnection teach students new ways of perceiving and understanding the world the concepts of scale and time teach them ways of analysing

the world while the concepts of sustainability and wellbeing show them how to evaluate and reflect on what they observe and all eight concepts develop their higher order and critical thinking To further support teachers this book includes a chapter on how to teach for conceptual understanding as well as two chapters that illustrate the application of geographical thinking to an understanding of the effects of land cover change and the problem of regional inequality Rich with practical examples this book is an essential resource for geography teachers whether already teaching or studying to become one and for those who teach them *Holt People, Places, and Change* Robert J. Sager, 2003

The Routledge Handbook of Methodologies in Human Geography Sarah A. Lovell, Stephanie E. Coen, Mark W. Rosenberg, 2022-10-18 The Routledge Handbook of Methodologies in Human Geography is the defining reference for academics and postgraduate students seeking an advanced understanding of the debates methodological developments and methods transforming research in human geography Divided into three sections Part I reviews how the methods of contemporary human geography reflect the changing intellectual history of human geography and events both within human geography and society in general In Part II authors critically appraise key methodological and theoretical challenges and opportunities that are shaping contemporary research in various parts of human geography Contemporary directions within the discipline are elaborated on by established and emerging researchers who are leading ontological debates and the adoption of innovative methods in geographic research In Part III authors explore cross cutting methodological challenges and prompt questions about the values and goals underpinning geographical research work such as Who are we engaging in our research Who is our research for What are our relationships with communities Contributors emphasize examples from their research and the research of others to reflect the fluid emotional and pragmatic realities of research This handbook captures key methodological developments and disciplinary influences emerging from the various sub disciplines of human geography

Spatial Simulation David O'Sullivan, George L. W. Perry, 2013-08-05 A ground up approach to explaining dynamic spatial modelling for an interdisciplinary audience Across broad areas of the environmental and social sciences simulation models are an important way to study systems inaccessible to scientific experimental and observational methods and also an essential complement to those more conventional approaches The contemporary research literature is teeming with abstract simulation models whose presentation is mathematically demanding and requires a high level of knowledge of quantitative and computational methods and approaches Furthermore simulation models designed to represent specific systems and phenomena are often complicated and as a result difficult to reconstruct from their descriptions in the literature This book aims to provide a practical and accessible account of dynamic spatial modelling while also equipping readers with a sound conceptual foundation in the subject and a useful introduction to the wide ranging literature *Spatial Simulation Exploring Pattern and Process* is organised around the idea that a small number of spatial processes underlie the wide variety of dynamic spatial models Its central focus on three building blocks of dynamic spatial models forces of attraction and segregation individual mobile entities and

processes of spread guides the reader to an understanding of the basis of many of the complicated models found in the research literature. The three building block models are presented in their simplest form and are progressively elaborated and related to real world process that can be represented using them. Introductory chapters cover essential background topics particularly the relationships between pattern process and spatiotemporal scale. Additional chapters consider how time and space can be represented in more complicated models and methods for the analysis and evaluation of models. Finally the three building block models are woven together in a more elaborate example to show how a complicated model can be assembled from relatively simple components. To aid understanding more than 50 specific models described in the book are available online at patternandprocess.org for exploration in the freely available Netlogo platform. This book encourages readers to develop intuition for the abstract types of model that are likely to be appropriate for application in any specific context. *Spatial Simulation Exploring Pattern and Process* will be of interest to undergraduate and graduate students taking courses in environmental social ecological and geographical disciplines. Researchers and professionals who require a non specialist introduction will also find this book an invaluable guide to dynamic spatial simulation.
