Introduction to the Biology of Vision James T. McIlwain,1996-11-28 This textbook is intended for use in a course for undergraduate students in biology neuroscience or psychology who have had an introductory course on the structure and function of the nervous system Its primary purpose is to provide a working vocabulary and knowledge of the biology of vision and to acquaint students with the major themes in biological vision research Part I treats the eye as an image forming organ and provides an overview of the projections from the retina to key visual structures of the brain Part II examines the functions of the retina and its central projections in greater detail building on the introductory material of Part I Part III treats certain special topics in vision that require this detailed knowledge of the structure and properties of the retina and visual projections

The Physiology of The Eye Hugh Davson,2012-12-02 The Physiology of the Eye Third Edition reviews major advances in the physiology of the eye including improvements in photochemical and electrophysiological techniques In particular the successful application of modern microelectrode techniques to the recording of activity at all stages in the visual pathway is considered This edition is organized into five sections and begins with an overview of the vegetative physiology and biochemistry of the eye emphasizing the aqueous humor and the intraocular pressure the vitreous body cornea and lens The following chapters discuss the mechanism of vision including the electrophysiology of the retina and some fundamental principles of ocular physiology An account of the important advances made possible by the application of modern methods to the analysis of the eye movements pupillary function and so on is also given The remaining sections focus on the theoretical and practical foundation laid by the work of classical research workers in the realm of physiological optics This book is intended for students and researchers in fields ranging from ocular science to physiology and biochemistry

Animal Eyes Michael F. Land,Dan-Eric Nilsson,2002 Animal Eyes aims to provide a comprehensive account of all known types of eye It takes the diversity of optical mechanisms as a framework but many other aspects of the structure and function of eyes are examined Visual ecology for example the way that eyes are specifically adapted to the lifestyles of the animals that bear them is another important theme The design philosophy of eyes is explored too what are the physical constraints on the way that an eye performs its functions and how are these addressed by the different types of eye Early and closing chapters look at the properties of light critical to vision and factors in eye adaptation like spatial resolution sensitivity and movement while the central sections assess the capabilities of a wide variety of eye types *The Biology of the Eye* Jorge Fischbarg,2005-12-09 Acknowledgement This book is the result of a collective effort Due to an oversight mention of three of the contributors who played an especially decisive role in bringing the work to fruition was omitted from the book They should share fully in the intellectual credits accruing from this publication I would therefore like to acknowledge and thank

Identification of Novel Regulators of Photoreceptor Gene Expression and Eye Development ,2011 *Anatomy of the Human Eye* ,19?? Cell Biology of the Eye David Mcdevitt,2012-12-02 Cell Biology of the Eye discusses the eye tissues and its role in the investigations on active transport growth factors receptors and differentiation The book is comprised of articles which discuss corneal proteoglycans transport of ions and metabolites across the corneal endothelium the ontogeny and localization of the crystallins in eye lens development and regeneration the biological physical basis of lens transparency the chromatic organization of the retina and the dopamine neurons in the retina This treatise will serve as a valuable reference text for graduate and professional students teachers researchers clinicians and to all in the vision field **“The” Genetic Basis of Eye Diseases** Jordi Maggi,2021 *Eyes to See* Michael Land,2018-11-15 Vision is the sense by which we and other animals obtain most of our information about the world around us Darwin appreciated that at first sight it seems absurd that the human eye could have evolved by natural selection But we now know far more about vision the many times it has independently evolved in nature and the astonishing variety of ways to see The human eye with a lens forming an image on a sensitive retina represents just one Scallops shrimps and lobsters all use mirrors in different ways Jumping spiders scan with their front facing eyes to check whether the object in front is an insect to eat another spider to mate with or a predator

to avoid Mantis shrimps can even measure the polarization of light Animal eyes are amazing structures often involving precision optics and impressive information processing mainly using wet protein not the substance an engineer would choose for such tasks In Eyes to See Michael Land one of the leading world experts on vision explores the varied ways in which sight has evolved and is used in the natural world and describes some of the ingenious experiments researchers have used to uncover its secrets He also discusses human vision including his experiments on how our eye movements help us to do everyday tasks as well as skilled ones such as sight reading music or driving He ends by considering the fascinating problem of how the constantly shifting images from our eyes are converted in the brain into the steady and integrated conscious view of the world we experience
