*Handbook of Disaster and Emergency Policies and Institutions* John Handmer, Stephen Dovers, 2012 Disasters both natural and human induced are leading to spiralling costs in terms of human lives lost livelihoods and damaged assets and businesses Yet these consequences and the financial and human crises that follow catastrophes can often be traced to policies unsuited to the emerging scales of the problems they confront and the lack of institutional capacity to implement planning and prevention or to manage disasters This book seeks to overcome this mismatch and to guide development of a policy and institutional framework For the first time it brings together into a coherent framework the insights of public policy institutional design and emergency and disaster management     Governance, Policy and Juxtaposition Michael Roe, 2019-10-01 This book considers governance and policy making within the maritime sector and focuses significantly on the dimensional context within which governance works Recognising the importance of understanding governance and policy at times when the world is faced with social political and economic problems it highlights the fact that both areas are equally significant in understanding today s political economy By focusing on the maritime sector a pillar industry supporting international trade activities the book offers a unique perspective to explain the difficulties of balancing policy making with governance in order to provide solutions It also examines the importance of developing a governance process that encourages and accommodates juxtaposition in a way that ensures that the effect of independent policy making is understood upon the success or otherwise of policies across a range of contexts and problems Given the in depth nature of the text it is of interest to academics researchers and professionals in the field     **Organization and Decision** Niklas Luhmann, Dirk Baecker, 2018-11-08 Luhmann s classic text on how organizations work how they should be designed steered and controlled and how they structure society     *Handbook of Disaster Policies and Institutions* John W. Handmer, Stephen Dovers, 2013 Disasters both natural and human induced are leading to spiralling costs in terms of human lives lost livelihoods and damaged assets and businesses Yet these consequences and the financial and human crises that follow catastrophes can often be traced to policies unsuited to the emerging scales of the problems they confront and the lack of institutional capacity to implement planning and prevention or to manage disasters This book seeks to overcome this mismatch and to guide development of a more strategic policy and institutional framework This updated and revised second edition includes new coverage of climate change adaptation which has rapidly become central to disaster and emergency planning and management This is an essential handbook for practitioners across the world seeking to improve the quality robustness and capacity of their disaster management mechanisms     *Agent-Based Models of Geographical Systems* Alison J. Heppenstall, Andrew T. Crooks, Linda M. See, Michael Batty, 2011-11-24 This unique book brings together a comprehensive set of papers on the background theory technical issues and applications of agent based modelling ABM within geographical systems This collection of papers is an invaluable reference point for the experienced agent based modeller as well those new to the area Specific geographical issues such as handling scale and space are dealt with as well as practical advice from

leading experts about designing and creating ABMs handling complexity visualising and validating model outputs With contributions from many of the world's leading research institutions the latest applied research micro and macro applications from around the globe exemplify what can be achieved in geographical context This book is relevant to researchers postgraduate and advanced undergraduate students and professionals in the areas of quantitative geography spatial analysis spatial modelling social simulation modelling and geographical information sciences Secrecy and Science Professor Brian Balmer, 2013-01-28 It is no secret that twentieth century Britain was governed through a culture of secrecy and secrecy was particularly endemic in military research and defence policy surrounding biological and chemical warfare More generally it is hard to exaggerate the role of secrecy in all past biological and chemical warfare programmes and several recent historical surveys of biological and chemical warfare research have emphasised that all state sponsored programmes together with sub state organised activities were cloaked in utmost secrecy Of these research programmes Britain carried out one of the most significant in scale and scope in the twentieth century Yet partly because of the secrecy surrounding the programme there is still little academic literature on its historical development Equally and despite secrecy being a pervasive feature of past and contemporary societies social scientists and historians have paid relatively little scholarly attention to the nature mechanics and effects of secrecy particularly with regard to secrecy in relation to the production and governance of science and technology Drawing on classical sociological writing on secrecy by Simmel Merton and Shils this groundbreaking book by Brian Balmer draws on recently declassified documents to investigate significant episodes in the history of biological and chemical warfare At the same time it draws on more contemporary perspectives in science and technology studies that understand knowledge and social order as co produced within heterogeneous networks of things and people in order to develop a theoretical set of arguments about how the relationship between secrecy and science might be understood

*The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems* Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economics sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production

**Philosophy and Engineering: Reflections on Practice, Principles and Process** Diane P Michelfelder, Natasha McCarthy, David E. Goldberg, 2014-01-13 Building on the breakthrough text *Philosophy and Engineering An Emerging Agenda* this book offers 30 chapters covering conceptual and substantive developments in the

philosophy of engineering along with a series of critical reflections by engineering practitioners The volume demonstrates how reflective engineering can contribute to a better understanding of engineering identity and explores how integrating engineering and philosophy could lead to innovation in engineering methods design and education The volume is divided into reflections on practice principles and process each of which challenges prevalent assumptions and commitments within engineering and philosophy The volume explores the ontological and epistemological dimensions of engineering and exposes the falsity of the commonly held belief that the field is simply the application of science knowledge to problem solving Above all the perspectives collected here demonstrate the value of a constructive dialogue between engineering and philosophy and show how collaboration between the disciplines casts light on longstanding problems from both sides The chapters in this volume are from a diverse and international body of authors including philosophers and engineers and represent a highly select group of papers originally presented in three different conferences These are the 2008 Workshop on Philosophy and Engineering WPE 2008 held at the Royal Academy of Engineering the 2009 meeting of the Society for Philosophy and Technology SPT 2009 at the University of Twente in the Netherlands and the Forum on Philosophy Engineering and Technology fPET 2010 held in Golden Colorado at the Colorado School of Mines

*International Perspectives on Maladministration in Education* Eugenie A. Samier, Peter Milley, 2018-04-19 This volume develops a theoretical and critical foundation for understanding maladministration the phenomena of harmful administrative and organisational behaviours in educational systems Chapter authors provide theoretical and practice based perspectives across international contexts regarding common destructive practices that occur in educational organisations such as negligence and mistreatment of people professional dishonesty fraud and embezzlement abuse of power and corrupt organisational cultures *International Perspectives on Maladministration in Education* shines a light on this complex topic by examining various practices at individual group organisational and system levels the contexts and influences that give rise to them and potential remedies to ensure more accountable just and safe institutions

**Handbook of Critical Environmental Politics** Pellizzoni, Luigi, Leonardi, Emanuele, Asara, Viviana, 2022-10-20 This timely Handbook offers a comprehensive outlook on global environmental politics providing readers with an up to date view of a field of ever increasing academic and public significance Its critical perspective interrogates what is taken for granted in current institutions and social and power relations highlighting the issues preventing meaningful change in the relationship between human societies and their biophysical underpinnings This title contains one or more Open Access chapters

**Making Sense of Messages** Mark Stoner, 2019-11-13 *Making Sense of Messages* now in its second edition retains the apprenticeship approach which facilitates effectively learning the complex content and skills of rhetorical theory and criticism A new chapter on The Rhetoric of Ignorance provides needed theory and examples that help students deal with the new rhetorical landscape marked by such discursive complexities as fake news whataboutism and denial of science that creates rather than reduces uncertainty in

public argument A new chapter Curating and Analyzing Multimodal Mediated Rhetoric deals with problems of media criticism in the digital age It provides theory models of application and commentary that help novice critics understand and mindfully practice criticism that leads to insight not mere opinion Throughout the book extended and updated examples and commentaries are designed to promote novice to expert agency in students This textbook is ideal for introductory courses in contemporary rhetoric rhetorical criticism and critical analysis of mass media

**Optimizing Community Infrastructure** Ryan Colker,2019-10-14 Optimizing Community Infrastructure Resilience in the Face of Shocks and Stresses examines the resilience measures being deployed within individual disciplines and sectors and how multi stakeholder efforts can catalyze action to address global challenges in preparedness and disaster and hazard mitigation The book provides a theoretical framework to advance thinking on creating resilient inclusive sustainable and safe communities Users will find an accurate and up to date guide for working on the development implementation monitoring and assessment of policies programs and projects related to community resilience Provides updated information on resilience especially on infrastructure finance land use standards and policies Includes case studies that illustrate how communities have increased their resilience to natural and other disasters Analyzes the institutional political social and economic dimensions of resilience at the community level Illustrates the interdependencies and interconnectedness of infrastructure systems and how community resilience relies on a holistic approach Examines responses to emerging risks associated with climate change

**Modeling Complex Data for Creating Information** Jacques-Emile Dubois,Nahum Gershon,2012-12-06 J E DUBOIS and N GERSHON As with Volume 1 in this series this book was inspired by the Symposium on Communications and Computer Aided Systems held at the 14th International CODATA Conference in September 1994 in Chambéry France This book was conceived and influenced by the discussions at the Symposium and most of the contributions were written following the Conference Whereas the first volume dealt with the numerous challenges facing the information revolution especially its communication aspects this one provides an insight into the recent tools provided by computer science for handling the complex aspects of scientific and technological data This volume Modeling Complex Data for Creating Information is concerned with real and virtual objects often involved with data handling processes encountered frequently in modeling physical phenomena and systems behavior Topics concerning modeling complex data for creating information include Object oriented approach for structuring data and knowledge Imprecision and uncertainty in information systems Fractal modeling and shape and surface processing Symmetry applications for molecular data The choice of these topics reflects recent developments in information systems technologies One example is object oriented technology Recently research development and applications have been using object oriented modeling for computer handling of data and data management Object oriented technology offers increasingly easy to use software applications and operating systems As a result science and technology research and applications can now provide more flexible and effective services

**Policing: Toward an Unknown Future** John Crank,Colleen Kadleck,2013-12-16 The

enclosed papers are the culmination of a project Dr John Crank and Dr Colleen Kadleck carried out assessing issues facing the police into the early 21st century The papers are future oriented in the sense that they anticipate trends visible today Everywhere the contributing scholars found that the organizational concept practice and function of the police were undergoing transition Yet the seeming state level hardening of the police function was ubiquitous Two themes were noteworthy On the one hand in developing or second world countries police face endemic problems of corruption organized crime and drugs Police in response are undergoing centralization and intensification of law enforcement activities In countries with first world economies Canada the United States and Australia contributors discovered trends toward expansion of the police function a trend described by Brodeur as toward high policing It reflects the growing reliance on surveillance for crime control and for the tracking of minority indigenous and immigrant populations in crime prevention efforts The results suggest that governments sometimes encouraged by their citizenry seem increasingly to rely on the police to deal with a broad array of social as well as criminal problems This book was originally published as a special issue of Police Practice and Research
