## **Iisc Life Science Question Paper:**

**The Indian Space Programme** Gurbir Singh, 2017-10-17 Fifty years in the making India's Space Programme is fulfilling the vision of its founders and delivering services from space that touch the lives of 1.3 billion people every day. In addition to operating a collection of satellites for weather, Earth observation, navigation and communication, today India has a spacecraft orbiting Mars and a space telescope in Earth orbit. This book provides the big picture of India's long association with science from historical figures like Aryabhata and Bhaskara to Homi Bhabha and Vikram Sarabhai, the key architects of its space program. It covers the scientific contribution of Indian scientists during the European Enlightenment and industrial revolution. It traces the technological development of Tipu Sultan's use of rockets for war in the 1780s, the all but forgotten contribution of Stephen H. Smith's use of rockets as a means of transport in 1935 in northern India and the emergence of Sriharikota, India's spaceport, the heart of India's modern Space Programme. A detailed account of how a fishing village in Kerala was transformed into a space centre and used to launch India's first rocket into space on 21 November 1963. A detailed summary of India's space infrastructure, launch vehicles, deep space network, Telemetry, Tracking and Command, and space assets in orbit. Description of how the ordinary people of India benefit from the services delivered by the space programme. Why India chose to go to the Moon and Mars and how it got there. The prospects for India's ambitions in space for human spaceflight, national security and scientific exploration. An analysis of how India's Space Programme may play out on the global stage. Will it compete or collaborate with China, USA and Russia in space. This detailed work in 645 pages, 29 tables and 9 appendices is richly illustrated with 140 illustrations, some images published for the first time, and supported by over 1,000 references. It is written for the non-specialist, offering a big picture view.

**Re-Imagining Sociology in India** Gita Chadha, M.T.

Joseph, 2018-05-16 This book maps the intersections between sociology and feminism in the Indian context. It retrieves the lives and work of women pioneers of and in sociology, asking crucial questions of their feminisms and their sociologies. The chapters address the experiential realities of women in the field, pedagogical issues, methodological frameworks, mentoring processes and artistic engagements with academic work. The volume's strength lies in bringing together Indian scholars from diverse social backgrounds and regions, reflecting on the specificity of the Indian social sciences. The chapters cover a range of key areas including sexuality, law, environment, science and medicine. This volume will greatly interest students, teachers, researchers and practitioners of sociology, women's studies, gender studies and feminism, politics and postcolonial studies.

**Nature's Third Cycle** Arnab Rai Choudhuri, 2015-01-29 The cycle of day and night and the cycle of seasons are two familiar natural cycles around which many human activities are organized But is there a third natural cycle of importance for us humans On 13 March 1989 six million people in Canada went without electricity for many hours a large explosion on the sun was discovered as the cause of this blackout Such explosions occur above sunspots dark features on the surface of the Sun that have been observed through telescopes since the time of Galileo The number of sunspots has been found to wax and wane over a period of 11 years Although this cycle was discovered less than two centuries ago it is becoming increasingly important for us as human society becomes more dependent on technology For nearly a century after its discovery the cause of the sunspot cycle remained completely shrouded in mystery The 1908 discovery of strong magnetic fields in sunspots made it clear that the 11 year cycle is the magnetic cycle of the sun It is only during the last few decades that major developments in plasma physics have at last given us the clue to the origins of the cycle and how the large explosions affecting the earth arise Nature's Third Cycle discusses the fascinating science behind the sunspot cycle and gives an insider
