Immune system

The **immune system** is a network of biological processes that protects an organism from diseases. It detects and responds to a wide variety of pathogens, from viruses to parasitic worms, as well as cancer cells and objects such as wood splinters, distinguishing them from the organism's own healthy tissue. Many species have two major subsystems of the immune system. The innate immune system provides a preconfigured response to broad groups of situations and stimuli. The adaptive immune system provides a tailored response to each stimulus by learning to recognize molecules it has previously encountered. Both use molecules and cells to perform their functions.

Nearly all organisms have some kind of immune system. Bacteria have a rudimentary immune system in the form of enzymes that protect against virus infections. Other basic immune mechanisms evolved in ancient plants and animals and remain in their modern descendants. These mechanisms include phagocytosis, antimicrobial peptides called defensins, and the complement system. Jawed vertebrates, including humans, have even more sophisticated defense mechanisms, including the ability to adapt to recognize pathogens more efficiently. Adaptive (or acquired) immunity creates an immunological memory leading to an enhanced response to subsequent encounters with that same pathogen. This process of acquired immunity is the basis of vaccination.

Dysfunction of the immune system can cause autoimmune diseases, inflammatory diseases and cancer. Immunodeficiency occurs when the immune system is less active than normal, resulting in recurring and life-threatening infections. In humans, immunodeficiency can be the result of a genetic disease such as severe combined immunodeficiency, acquired conditions such as HIV/AIDS, or the use of immunosuppressive medication. Autoimmunity results from a hyperactive immune system attacking normal tissues as if they were foreign organisms. Common autoimmune diseases include Hashimoto's thyroiditis, rheumatoid arthritis, diabetes mellitus type 1, and systemic lupus erythematosus. Immunology covers the study of all aspects of the immune system.

population are often excluded from drug trials and their treatments are largely based on findings extrapolated from that of the younger old. Furthermore, among the oldest old, physiologically, they are more diverse than other segments of the population. Their demographic characteristics are unparalleled and different compared to that of the younger old. Several studies have drawn attention to the differing attitudes among health professionals towards elderly people and many show prejudice because they are old. As a result, the use of age as a criteria in determining the appropriateness of treatment is of very limited validity, yet there are limited resources that guide physicians through these challenges. This book creates a greater awareness of these challenges and offers practical guidelines for working within the infrastructures vital to this demographic. This book is designed for geriatricians, primary care physicians, junior medical officers, specialty geriatrics nurses, and gerontologists. It is divided into 3 sections: General Considerations, Chronic diseases, and Geriatric Syndromes. Each chapter provides a summary of important and essential information under the heading of Key Points. Case studies are included in some of the chapters to highlight the principles of management. *Disrupt With Impact* Roger Spitz, 2024-09-03

A revelatory new theory of consciousness that returns emotions to the center of mental life. For Mark Solms, one of the boldest thinkers in contemporary neuroscience, discovering how consciousness comes about has been a lifetime's quest. Scientists consider it the hard problem because it seems an impossible task to understand why we feel a subjective sense of self and how it arises in the brain. Venturing into the elementary physics of life, Solms has now arrived at an astonishing answer. In *The Hidden Spring*, he brings forward his discovery in accessible language and graspable analogies. Solms is a frank and fearless guide on an extraordinary voyage from the dawn of neuropsychology and psychoanalysis to the cutting edge of contemporary neuroscience, adhering to the medically provable. But he goes beyond other neuroscientists by paying close attention to the subjective experiences of hundreds of neurological patients, many of whom he treated, whose uncanny conversations expose much about the brain's obscure reaches. Most importantly, you will be able to recognize the workings of your own mind for what they really are, including every stray thought, pulse of emotion, and shift of attention. *The Hidden Spring* will profoundly alter your understanding of your own subjective experience. **Encouraging and Supporting Student Inquiry** Harriet S.

Silverstone,2007-09-30 Assignments that engage students in inquiry topics of their own choosing contribute to motivation and thus to learning Very often the topics chosen particularly by high school students are considered controversial by school administration parents community organizations and others This practical book discusses the processes actions and policies needed to support and encourage high school students in that type of inquiry Building trusting relationships over time with administration and the school community will be stressed as a way to build a community of true inquiry in your school and library Classroom teachers and high school librarians will value the advice and scaffolding techniques presented that will enable their school and high school library to become a safe place for student inquiry into issues of their own choosing controversial or not The author draws on her 30 plus years as a high school librarian deeply concerned with the intellectual freedom of the researchers in her library media center and with offering help and reassurance to those trying to implement school library programs that allow all voices to be heard Grades 9 12

WHAT IS MAN? Edgar Andrews,2018-07-03 In 1906 American humorist Mark Twain published a sixty page essay entitled What is man Consisting of an interminable dialogue between a senior citizen who believes that man is just a machine and a young man who believes nothing in particular but is open to persuasion it wasn't one of his finest books But at least he tried Authors since then seem to have avoided the subject like the plague often tackling the respective roles of men and women in society but seldom asking deeper questions about what it means to be human When the psalmist asked What is man Psalm 8 v 4 he was I think seeking an altogether more profound answer Avoidance of the subject is all the more strange because there has never been a time like our own when curiosity about human origins and destiny has been greater or the answers on offer more hotly disputed It's a safe bet that any attempt to give the big picture on the origin nature and specialness of mankind will be contentious which might explain why writers have generally fought shy of it Yet at heart it is the question most of us really do want answered because the answer defines that precious thing we call our identity both personally and as a race The Psalmist did of course offer his own answer three millennia ago Man he claimed was created by God for a clearly defined purpose to exercise dominion over planet earth and by implication to ultimately share something of the glory of the divine nature The rest as they say is history but it's not a happy tale As Mark Twain says in another essay I can't help being disappointed with Adam and Eve Not surprisingly then a large proportion of humanity today are looking for alternative solutions accepting the challenge of the Psalmist's question without embracing the optimism of his answer In this book we are going to consider the alternative solutions on offer by considering what it means to be human against the backgrounds of cosmology man's place in the universe biology man's place in the animal kingdom and psychology man's consciousness and mind Finally we return to the biblical context arguing that the Psalmist got it right after all Don't let the science sounding stuff put you off Like its popular prequel Who made God Searching for a theory of everything this book is written with a light touch in a reader friendly and often humorous style It is intended specifically for the non expert with homely verbal illustrations designed to explain and

unpack the technicalities for the lay person As Dr Paul Copan Pledger Family Chair of Philosophy and Ethics Palm Beach Atlantic University says Edgar Andrews has a way of making the profound accessible His scholarship informs the reader about key questions of our time offering wise guidance and illumination
