IBM IMS Solutions for Automating Database Management Paolo Bruni,Rafael Henrique Vedovatto Bindillati,James Kelly,Rick Long,Acacio Ricardo Gomes Pessoa,IBM Redbooks,2014-12-09 Over the last few years IBM IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs As the mainframe software products are becoming more integrated with the Windows and mobile environments a common approach to interfaces is becoming more relevant The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes There is also a need to provide more of a common looking interface so the tools do not have a product specific interface This allows more cross product integration Eclipse and web based interfaces being used in a development environment tooling using those environments provides productivity improvements in that the interfaces are common and familiar IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions This book will take some selected processes and show how this new tooling can be used This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs Some of the functions normally done by DBA or console operators can now be done in this eclipse based environment by the application developers This means that the need to request these services from others can be eliminated This IBM Redbooks publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features which show an alternative way to accomplish those processes Each chapter highlights a different area of the DBA processes like PSB creation Starting stopping a database in an IMS system Recovering a database Cloning a set of databases

Improving z/OS Application Availability by Managing Planned Outages Frank Kyne, Andy Clifton, Justin Deane, Fernando Ferreira, Richard Gunjal, Chuck Laurent, John Papp, Judy Ruby-Brown, Maida Snapper, Michael Stephen, Dave Viguers, Marna Walle, Yvonne Zemotel, IBM Redbooks, 2014-12-22 This IBM Redbooks publication is intended to make System Programmers Operators and Availability Managers aware of the enhancements to recent releases of IBM z OS and its major subsystems in the area of planned outage avoidance It is a follow on to rather than a replacement for z OS Planned Outage Avoidance Checklist SG24 7328 Its primary objective is to bring together in one place information that is already available but widely dispersed It also presents a different perspective on planned outage avoidance Most businesses care about application availability rather than the availability of a specific system Also a planned outage is not necessarily a bad thing if it does not affect application availability In fact running for too long without an IPL or subsystem restart might have a negative impact on application availability because it impacts your ability to apply preventive service Therefore this book places more focus on decoupling the ability to make changes and updates to your system from IPLing or restarting your systems
