Innovation through Knowledge Transfer 2012 Robert J. Howlett, Bogdan Gabrys, Katarzyna Musial-Gabrys, Jim Roach, 2012-12-04 Across the world there is growing awareness of the importance of innovation and knowledge transfer. Innovation in the sense of generating new knowledge and making better use of existing knowledge coupled with knowledge transfer and sharing paradigms have never been more relevant to the universities, industry, commerce and the third sector. This volume represents the proceedings of the Innovation through Knowledge Transfer 2012 Conference which formed an excellent opportunity to disseminate, share and discuss the impact of innovation, knowledge sharing, enterprise and entrepreneurship. The volume contains papers presented at a Workshop on The Meta Transfer of Knowledge Challenges in the Transfer of Knowledge in Industry, others from thematic sessions on Next Practice in University Based Open Innovation, Social Innovation and Related Paradigms, Engagement with Industry and Commerce and Knowledge Exchange. All papers were thoroughly reviewed by referees knowledgeable in practical and theoretical aspects of the subject. *Recording Science in the Digital Era* Cerys Willoughby, 2019-07-15 For most of the history of scientific endeavour, science has been recorded on paper. In this digital era, however, there is increasing pressure to abandon paper in favour of digital tools. Despite the benefits, there are barriers to the adoption of such tools, not least their usability. As the relentless development of technology changes the way we work, we need to ensure that the design of technology not only overcomes these barriers but facilitates us as scientists and supports better practice within science. This book examines the importance of record keeping in science, current record keeping practices and the role of technology for enabling the effective capture, reuse, sharing and preservation of scientific data. Covering the essential areas of electronic laboratory notebooks (ELNs) and digital tools for recording scientific data, including an overview of the current data management technology available and the benefits and pitfalls of using these technologies, this book is a useful tool for those interested in implementing digital data solutions within their research groups or departments. This book also provides insight into important factors to consider in the design of digital tools such as ELNs for those interested in producing their own tools. Finally, it looks at the role of current technology and then considers how that technology might develop in the future to better support scientists in their work and in capturing and sharing the scientific record. **Collaborative Research in Language Education** Gudrun Erickson, Camilla Bardel, David Little, 2023-07-24 Language education at all levels benefits from research in a multitude of ways. Conversely, educational practices and experiences offer fertile ground for research into language learning, teaching and assessment. This book views research in language education as a reciprocal venture that should benefit all participants equally. Practice is shaped by theory, which in turn is illuminated and refined by practice. The book brings together studies from different fields of language education in nine countries on four continents: Cameroon, Canada, Finland, India, Ireland, Israel, Italy, Japan and Sweden. The authors report on research that depends on the active involvement of teachers, teacher educators and learners of

different ages and various backgrounds The book focuses on projects designed to address challenges in the classroom and on the role of learners as collaborative agents in the research process as well as collaborative research in professional development and the role of collaborative research in the development of national policy **Designing Digital Work**
